Wilcoxon Signed-Rank Test

- For small samples, a special table is required to obtain critical values.
- For large samples ($n \geq 20$), the test statistic is approximately normal.

$$z = \frac{W - \frac{n(n+1)}{4}}{\sqrt{\frac{n(n+1)(2n+1)}{24}}}$$

$$H_0 : M_{specialty} = 20.2$$

$$H_1 : M_{specialty} \neq 20.2$$

- Use Excel to get a p-value
- Reject H_0 if p-value $\leq \alpha$

Theory of Rank Tests Zbynek Sidak,Pranab K. Sen,Jaroslav Hajek,1999-04-06 The first edition of Theory of Rank Tests 1967 has been the precursor to a unified and theoretically motivated treatise of the basic theory of tests based on ranks of the sample observations For more than 25 years it helped raise a generation of statisticians in cultivating their theoretical research in this fertile area as well as in using these tools in their application oriented research The present edition not only aims to revive this classical text by updating the findings but also by incorporating several other important areas which were either not properly developed before 1965 or have gone through an evolutionary development during the past 30 years This edition therefore aims to fulfill the needs of academic as well as professional statisticians who want to pursue nonparametrics in their academic projects consultation and applied research works Asymptotic Methods Nonparametrics Convergence of Probability Measures Statistical Inference *Annotated Bibliography on Robustness Studies of Statistical Procedures* Z. Govindarajulu,R. T. Leslie,1972 Robust Estimation and Testing Robert G. Staudte,Simon J. Sheather,2011-09-15 An introduction to the theory and methods of robust statistics providing students with practical methods for carrying out robust procedures in a variety of statistical contexts and explaining the advantages of these procedures In addition the text develops techniques and concepts likely to be useful in the future analysis of new statistical models and procedures Emphasizing the concepts of breakdown point and influence functon of an estimator it demonstrates the technique of expressing an estimator as a descriptive measure from which its influence function can be derived and then used to explore the efficiency and robustness properties of the estimator Mathematical techniques are complemented by computational algorithms and Minitab macros for finding bootstrap and influence function estimates of standard errors of the estimators robust confidence intervals robust regression estimates and their standard errors Includes examples and problems NBS Special Publication ,1970
