Abstract

For example, the following table shows the results of a regression analysis of the relationship between the number of hours worked per week and the number of hours of sleep per night. The regression equation is $\hat{y} = 0.001x + 7.5$, where $\hat{y}$ is the predicted number of hours of sleep per night and x is the number of hours worked per week. The coefficient of determination is $R^2 = 0.0001$, which indicates that the model explains only 0.01% of the variation in the number of hours of sleep per night.
