Machine Learning Proceedings 1992 Peter Edwards, Derek Sleeman, 2014-06-28 Machine Learning Proceedings 1992

A Volterra Approach to Digital Predistortion Carlos Crespo Cadenas, Maria Jose Madero Ayora, Juan A.

Becerra, 2025-01-15 Thorough discussion of the theory and application of the Volterra series for impairments compensation in RF circuits and systems A Volterra Approach to Digital Predistortion Sparse Identification and Estimation offers a comprehensive treatment of the Volterra series approach as a practical tool for the behavioral modeling and linearization of nonlinear wireless communication systems Although several perspectives can be considered when analyzing nonlinear effects this book focuses on the Volterra series to study systems with real valued continuous time RF signals as well as complex valued discrete time baseband signals in the digital signal processing field A unified framework provides the reader with in depth understanding of the available Volterra based behavioral models in particular the book emphasizes those models derived by exploiting the knowledge of the physical phenomena that produce different types of nonlinear distortion From these distinctive standpoints this work remarkably contributes to theoretical issues of behavioral modeling The book contributes to practical state of the art questions on linearization granting the reader practical guidance in designing digital predistortion schemes and adopting up to date machine learning methods to exploit the sparsity of the identification problem and reducing computational complexity Later chapters include information on Identification of Volterra based models as a linear regression problem allowing the adoption of sparse machine learning methods to reduce computational complexity while keeping rich model structures Deduction of Volterra models based on circuit model knowledge offering pruned model structures that are better fitted for specific scenarios Wireless communication systems and the nonlinear effects produced by power amplifiers mixers frequency converters or IQ modulators Digital predistortion schemes and experimental results for both indirect and direct learning architectures A Volterra Approach to Digital Predistortion Sparse Identification and Estimation is an essential reference on the subject for engineers and technicians who develop new products for the linearization of wireless transmitters as well as researchers and students in fields and programs of study related to wireless communications

Modelling and Control of Dynamic Systems Using Gaussian Process Models Juš Kocijan, 2015-11-21 This monograph opens up new horizons for engineers and researchers in academia and in industry dealing with or interested in new developments in the field of system identification and control It emphasizes guidelines for working solutions and practical advice for their implementation rather than the theoretical background of Gaussian process GP models The book demonstrates the potential of this recent development in probabilistic machine learning methods and gives the reader an intuitive understanding of the topic The current state of the art is treated along with possible future directions for research Systems control design relies on mathematical models and these may be developed from measurement data This process of system identification when based on GP models can play an integral part of control design in data based control and its

description as such is an essential aspect of the text The background of GP regression is introduced first with system identification and incorporation of prior knowledge then leading into full blown control The book is illustrated by extensive use of examples line drawings and graphical presentation of computer simulation results and plant measurements The research results presented are applied in real life case studies drawn from successful applications including a gas liquid separator control urban traffic signal modelling and reconstruction and prediction of atmospheric ozone concentration A MATLAB toolbox for identification and simulation of dynamic GP models is provided for download

Assessing Students' Digital Reading Performance Jie HU,2022-12-30 This book provides a systematic study of the Programme for International Student Assessment PISA based on big data analysis aiming to examine the contextual factors relevant to students digital reading performance The author first introduces the research landscape of educational data mining EDM and reviews the PISA framework since its launch and how it has become an important metric to assess the knowledge and skills of students from across the globe With a focus on methodology and its applications the book explores extant scholarship on the dynamic model of educational effectiveness multi level factors of digital reading performance and the application of EDM approaches The core chapter on the methodology examines machine learning algorithms hierarchical linear modeling mediation analysis and data extraction and processing for the PISA dataset The findings give insights into the influencing factors of students digital reading performance allowing for further investigations on improving students digital reading literacy and more attention to the advancement of education effectiveness The book will appeal to scholars professionals and policymakers interested in reading education educational data mining educational technology and PISA as well as students learning how to utilize machine learning algorithms in examining the mass global database
