

## **Chapter 7: DATA SAMPLING**

Definition of terms:

Target population (reference population):

1. **UNIVERSE:** Totality of items or units in any field of enquiry
2. **POPULATION:** Total of items about which information is desired aggregate of elementary units (finite or infinite, N) possess at least one common characteristics – real or hypothetical
3. **ELEMENTARY UNITS:** Units possessing the relevant characteristics i.e., attribute that are the objects of study (operational definition)
4. **SAMPLE FRAME:**

- A list of all the units of population
- Perfect frames seldom exists; elementary units or cluster of such units or the group from the basis the basis for frame for finite population
- Frame is either constructed by researcher or some existing list of population is used

Sampling frame should be good representative of the population and as far as possible free from

- (i) Incompleteness
- (ii) Inaccuracy
- (iii) Inadequateness
- (iv) Out-of-date (complete, no missing element, no ineligibles, no element should appear more than once & up to date)

5. **SAMPLING DESIGN:** (Target population Survey population)

- A define plan for obtaining a sample from the sampling frame
- Refers to technique or procedure adopted by researcher

**Sampling unit**

Individual, group, family, village, district, etc. Natural (e.g., Geographical) or constructed (e.g., Social entity)

### **DETERMINING SAMPLE DESIGN**

Researchers usually draw conclusions about large groups by taking a sample

*A Sample is a segment of the population selected to represent the population as a whole.*

Ideally, the sample should be representative and allow the researcher to make accurate estimates of the thoughts and behavior of the larger population.

Designing the sample calls for three decisions:

*Who will be surveyed? (The Sample)*

- The researcher must determine what type of information is needed and who is most likely to have it.

*How many people will be surveyed? (Sample Size)*

- Large samples give more reliable results than small samples. However it is not necessary to sample the entire target population.

*How should the sample be chosen? (Sampling)*

- Sample members may be chosen *at random* from the entire population (*probability sample*)
- The researcher might *select people who are easier to obtain* information from (*nonprobability sample*)

Hockenbury, Sandra E. Hockenbury, 2016-03-02 Sandra Hockenbury and new coauthor Susan Nolan's remarkable textbook is  
grounded in the belief that all kinds of students can develop a real understanding of psychology and lasting scientific literacy.  
The authors act on that belief by using relatable personal stories to communicate the concepts of psychological science and  
the process of science itself, and by presenting important research in a clear, not oversimplified way. Hockenbury and Nolan  
also take full advantage of online learning, creating activities in LaunchPad that have students thinking about psychology as  
scientists do. New coauthor Susan Nolan of Seton Hall University was recently designated a Master Teacher by the Society  
for Teaching Psychology. She regularly gives talks about incorporating scientific literacy into the introductory course and  
across the psychology curriculum      **Biometrics**, 1994 Emphasizes the role of statistics and mathematics in the biological
