Chapter 7 Biodiversity And Ecosystem Health:

Textbook for Environmental Studies Dr Shaikh Ahmad Shaikh Ismail, 2019-03-05 This textbook is written to bring about an awareness of a variety of environmental concerns. It covers a wide range of topics and issues about environmental science. It attempts to create a pro environmental attitude and a behavioral pattern in society that is based on creating sustainable lifestyles. But a textbook can hardly be expected to achieve a total behavioral change in society. Conservation is best brought about through creating a love for nature.

Aquaculture Ecosystems Saleem Mustafa, Rossita Shapawi, 2015-08-25 Aquaculture Ecosystems contains a thorough and exciting synthesis of current information on aquaculture practices and substantial discussion of the way forward in transforming the aquaculture industry by improving its sustainability. This important book includes discussion of all the current major issues relating to aquaculture practices in relation to the ecology of their situations, environmental concerns and details of how sustainability can be improved. Efforts have been made to include chapters that go beyond the stage of debate on old topics, providing conclusions to provide leads for action plans and practices addressing modern challenges such as global climate change. Commencing with a chapter covering concerns and solutions centred around seafood security, the following chapters cover the biology and behavior of aquatic animals and their selection for use in aquaculture systems, integrated multi trophic aquaculture, nutrient inputs and pollution, biofouling, blue carbon stocks in coastal aquaculture, climate change adaptations and knowledge management in aquaculture. Written by internationally recognized experts in aquaculture and ecology and edited by Saleem Mustafa, well known for his work in aquatic sciences, the book provides a great deal of use and interest to all those involved in aquaculture planning and development, environmental sciences and aquatic ecology. All libraries in universities and research establishments where biological sciences and aquaculture are studied and taught should have copies of this vital reference on their shelves.

Ecosociocentrism Gopi Upreti, 2023-11-30 This book on the subject of global environmental crisis and climate change that has threatened the very existence of humankind and the living system on planet Earth claims that the current Anthropocene is the most dangerous era of environmental and ecological crisis the planet Earth has ever witnessed. This book not only insightfully reflects upon the crisis manifested by climate change, breakdown of planetary ecosystem, extinction and annihilation of millions of species, acidification of oceans, desertification of productive lands and toxic pollution, attributing to the current dominant neoliberal economic model, but also presents a new ethical development framework that recognizes and promotes the instrumental, relational and intrinsic values in the Earth system which form the basis for social and environmental sustainability. This is a useful book for all stakeholders involved in environmental protection, UN and development agencies, INGOs, civil societies, NGOs, governments, officials and professionals, media personnel, universities, faculties, students and researchers.
