

DESIGN 2: WHOLE HOUSE VENTILATION SYSTEM

This whole house ventilation system uses a centralized two-speed exhaust fan to draw air from the kitchen, bath, laundry, and living areas. A timer controls the blower. The system should provide approximately 0.35 natural air changes per hour (ACHnat) on low speed and 1.0 ACHnat on high speed. A separate dampered duct connected to the return air system supplies outside air. When the exhaust fan operates, Figure 7-14, the outside air damper opens and allows air to be drawn into the house through the forced-air ductwork.
