Issues such as naming and classification of chemicals, safety formulations and specifications, information and patents are treated. Process related topics are discussed such as scaling up, equipment selection, construction materials, environmental impact and waste minimization. Aspects which fall in between the traditional disciplines of chemistry and chemical engineering are covered which are so critical for the development of a successful industrial process and the awareness of which avoids pitfalls in industrial research and development. Case studies are given and special appendices provide useful information for the industrial chemist or student. The book is aimed at industrial chemists and engineers and at students in those faculties intending to pursue this field in industry. Marketing and purchasing staff will also find this text valuable.

Guidelines for Investigating Chemical Process Incidents American Institute of Chemical Engineers. Center for Chemical Process Safety, 1992. Newest techniques for complex investigations based on actual plant and industry data. These Guidelines establish a basis for successful feedback through investigation of process incidents to determine the many causes and to implement changes which will prevent recurrence. It provides a clear definition of the role of incident investigation in overall process safety management as well as guidelines, concepts and options. Detailed investigation techniques and how to establish such a system are set out for plant staff, technical professionals or middle level managers. Primary focus is on incidents with catastrophic potential but the concepts should also be used for investigating environmental incidents, minor injuries, less significant property damage events or near misses. Also provides an overview of incident investigation principles as implemented by other industries worldwide. The annotated bibliography included makes this practical handbook an invaluable reference source.

Partial contents: Basic Incident Investigation Techniques, Practical Investigation Considerations, Multiple Cause Determination, Recommendations and Follow through, Formal Reports and Communications Issues, Development and Implementation.
