**Bioorganic Chemistry** H. Dugas, C. Penney, 2013-03-13 Springer Advanced Texts in Chemistry New textbooks at all levels of chemistry appear with great regularity Some fields like basic biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and new or revised editions are published sufficiently often to keep up with progress in research However some areas of chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists actually involved in the research which is advancing the field It is not often easy to persuade such individuals to set time aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas should help stimulate the creation of new courses New York New York CHARLES R Study of the Peptide-Peptide and Peptide-Protein Interactions and Their Applications in Cell Imaging and Nanoparticle Surface Modification Jianpeng Wang, 2016-09-26 This thesis focuses on the study of interactions between protein and peptides and their potential applications in cell imaging and nanoparticle surface modification Drawing inspiration from naturally occurring coiled coil binding pairs it proposes a novel covalent peptide tag and probe system based on the concept of affinity guided covalent conjugation This newly established methodology provides complementary resolution to protein labeling imaging and trafficking By systematically investigating the coordination interaction between protein and quantum dots using various engineered protein ligands this thesis proposes a general rule for protein self assembly on the surface of quantum dots and reports a revolutionized nanobelt protein in accordance with this rule It is an extraordinary example of interdisciplinary research providing answers to real life biological problems from a chemistry perspective Foye's Principles of Medicinal Chemistry Victoria Roche, William S. **Bioorganic Chemistry in Healthcare and Technology** Upendra K. Pandit, Frank C. Alderweireldt, 2012-12-06 In current thinking Bioorganic Chemistry may be defined as the area of chemistry which lies in the border region between organic chemistry and biology and which describes and analyzes biological phenomena in terms of detailed molecular structures and molecular mechanisms This molecular level view of biological processes is not only essential to their fuller understanding but also serves as the platform for the application of the principles of such processes to areas of health care and technology The objective of the ASI workshop on Bioorganic Chemistry in Healthcare and Technology held in the Hengelhof Congress Centre in Houthalen Helchteren Belgium from September 18 21 1990 was to bring together most of the international experts in the field to discuss the current developments and new trends in

bioorganic chemistry especially in relation to the selected theme The book presents nineteen invited plenary and session lectures and eighteen posters These cover areas of i molecular design of therapeutic and agronomical agents based upon mechanistic rationale or drug receptor interactions ii production of substances of commercial value via combined organic chemical and bio chemical methodologies iii fundamental studies on the molecular mechanisms of enzymes and iv the evolution of conceptually new molecular systems which are programmed to execute specific recognition and or catalytic functions An abstracted version of the plenary discussion held at the end of the workshop is also included We feel confident that the subject matter of this book will be of interest to a broad group of chemists engaged in academic or industrial research
