

Chapter 7: Research design

As stated in the introduction, the research design adopted in this inquiry was primarily influenced by Guba and Lincoln's (1989) conception of Naturalistic Inquiry, which they later acknowledged was a form of Constructivism (Guba and Lincoln, 1989), and to a lesser extent, Charmaz's (2006) constructivist conception of Grounded Theory. These are explicated upon in the next sections with reference to Crotty's (1998) four research design elements. Decisions that were taken that influenced the research design are woven into the narrative.

7.1 Crotty's research design elements

Crotty claims that the terminology used in research literature is confusing, with epistemologies, theoretical perspectives, methodologies and methods "thrown together in jargonist style as if they were all comparable terms" (Crotty, 1998:2). Crotty suggests these terms represent distinct hierarchical levels of decision-making within the research design process. For example, a researcher initially adopts a particular stance towards the nature of knowledge (for example, objectivism or subjectivism). This stance or epistemology will underlie the entire research process and governs the particular theoretical perspective selected (for example, positivism or interpretivism). The theoretical perspective will be implicit in research questions and dictate the researcher's choice of methodology (for example, grounded theory or ethnography). Finally, the methodology or plan of action will in turn inform the choice of research methods employed (for example, questionnaire or interview). Crotty (1998) recognises that the entire strategy here for research process but conflates it with epistemology claiming the two are mutually dependent and difficult to distinguish conceptually when discussing research issues: "to talk about the construction of meaning [epistemology] is to talk of the construction of a meaningful reality [ontology]" (Crotty, 1998:16). Crosswell (2008), who uses his research process framework as Crotty's (1998) four research design elements, implies that these four decision-making elements lead to a research approach which tends to be more quantitative, qualitative or mixed, primarily dependent on the researcher's initial stance towards the nature of knowledge.
