Classical Thermodynamics of Non-Electrolyte Solutions H. C. Van Ness, 2013-10-22 Classical Thermodynamics of Non Electrolyte Solutions covers the historical development of classical thermodynamics that concerns the properties of vapor and liquid solutions of non electrolytes Classical thermodynamics is a network of equations developed through the formal logic of mathematics from a very few fundamental postulates and leading to a great variety of useful deductions This book is composed of seven chapters and begins with discussions on the fundamentals of thermodynamics and the thermodynamic properties of fluids The succeeding chapter presents the equations of state for the calculation of the thermodynamic behavior of constant composition fluids both liquid and gaseous These topics are followed by surveys of the mixing of pure materials to form a solution under conditions of constant temperature and pressure The discussion then shifts to general equations for calculation of partial molal properties of homogeneous binary systems The last chapter considers the approach to equilibrium of systems within which composition changes are brought about either by mass transfer between phases or by chemical reaction within a phase or by both Migration of Radionuclides Through Sorbing Media Analytical Solutions ,1982
