Paperbound Books in Print, 1992      *Evolving Nature of Objectivity in the History of Science and its Implications for*  
*Science Education* Mansoor Niaz, 2017-10-26 This book explores the evolving nature of objectivity in the history of science  
and its implications for science education It is generally considered that objectivity certainty truth universality the scientific  
method and the accumulation of experimental data characterize both science and science education Such universal values  
associated with science may be challenged while studying controversies in their original historical context The scientific  
enterprise is not characterized by objectivity or the scientific method but rather controversies alternative interpretations of  
data ambiguity and uncertainty Although objectivity is not synonymous with truth or certainty it has eclipsed other epistemic  
virtues and to be objective is often used as a synonym for scientific Recent scholarship in history and philosophy of science  
has shown that it is not the experimental data Baconian orgy of quantification but rather the diversity plurality in a scientific  
discipline that contributes toward understanding objectivity History of science shows that objectivity and subjectivity can be  
considered as the two poles of a continuum and this dualism leads to a conflict in understanding the evolving nature of  
objectivity The history of objectivity is nothing less than the history of science itself and the evolving and varying forms of  
objectivity does not mean that one replaced the other in a sequence but rather each form supplements the others This book is  
remarkable for its insistence that the philosophy of science and in particular that discipline's analysis of objectivity as the  
supposed hallmark of the scientific method is of direct value to teachers of science Meticulously yet in a most readable way  
Mansoor Niaz looks at the way objectivity has been dealt with over the years in influential educational journals and in

textbooks it s fascinating how certain perspectives fade while basic questions show no sign of going away There are few books that take both philosophy and education seriously this one does Roald Hoffmann Cornell University chemist writer and Nobel Laureate in Chemistry *Outline of the Method of Conducting a Trigonometrical Survey, for the Formation of Geographical and Topographical Maps and Plans* Edward Charles Frome,1873 **Boiler and Factory Chimneys** Robert Wilson,1899 *The Purification of Sewage, Being a Brief Account of the Scientific Principles of Sewage Purification and Their Practical Application* Sidney Barwise,1904 **Modern machine shop tools, a treatise describing the construction, operation and manipulation of hand and machine tools** William Humphrey Van Dervoort,1903 *Hydraulic Power Engineering* George Croydon Marks Baron Marks of Woolwich,1905 **The Hydro-metallurgy of Copper** Manuel Eissler,1902 **On Gas Engines** Thomas Minchin Goodeve,1902 **Practical Masonry** William R.
