Sharangi, 2021-11-13 This book is a unique overview of insights on the genetic basis of anti diabetic activity chemistry physiology biotechnology mode of action as well as cellular mechanisms of anti diabetic secondary metabolites from medicinal plants The World Health Organization estimated that 80% of the populations of developing countries rely on traditional medicines mostly plant drugs for their primary health care needs There is an increasing demand for medicinal plants having anti diabetic potential in both developing and developed countries The expanding trade in medicinal plants has serious implications on the survival of several plant species with many under threat to become extinct This book describes various approaches to conserve these genetic resources It discusses the whole spectrum of biotechnological tools from micro propagation for large scale multiplication cell culture techniques to the biosynthesis and enhancement of pharmaceutical compounds in the plants It also discusses the genetic transformation as well as short to long term conservation of plant genetic resources via synthetic seed production and cryopreservation respectively The book is enriched with expert contributions from across the globe This reference book is useful for researchers in the pharmaceutical and biotechnological industries medicinal chemists biochemists botanists molecular biologists academicians students as well as diabetic patients traditional medicine practitioners scientists in medicinal and aromatic plants Ayurveda Siddha Unani and other traditional medical practitioners

Dictionary of Plant Breeding Rolf H. J. Schlegel, 2009-10-14 Arguably one of the oldest scientific traditions plant breeding began in Neolithic times with methods as simple as saving the seeds of desirable plants and sowing them later It was not until the re encounter with Mendel s discoveries thousands of years later that the genetic basis of breeding was understood Developments since then have provided further insight into how genes acting alone or in concert with other genes and the environment result in a particular phenotype From Abaxial to Zymogram the Dictionary of Plant Breeding contains clear and useful definitions of the terms associated with plant breeding and related scientific technological disciplines This second edition of a bestseller defines jargon provides helpful tables examples and breeding schemes and includes a list of crop plants with salient details Packed with data and organized to make that data easy to access this revised and expanded reference provides comprehensive coverage of the latest discoveries in cytogenetics molecular genetics marker assisted selection experimental gene transfer seed sciences crop physiology and genetically modified crops A complex subject plant breeding draws from many scientific and technological disciplines often making it difficult to know the precise meanings of many terms and to accurately interpret specific concepts Most dictionaries available are highly specific and fragmentary As in the previous edition this dictionary unifies concepts by including the specific terms of plant breeding and terms that are adjusted from other disciplines Drawing on the author s 30 years of experience the dictionary provides an encyclopedic list of commonly used technical terms that reflect the latest developments in the field

Biotechnological

Approaches for Medicinal and Aromatic Plants Nitish Kumar,2018-09-11 For the majority of the world's population medicinal and aromatic plants are the most important source of life saving drugs Biotechnological tools represent important resources for selecting multiplying and conserving the critical genotypes of medicinal plants In this regard in vitro regeneration holds tremendous potential for the production of high quality plant based medicines while cryopreservation a long term conservation method using liquid nitrogen provides an opportunity to conserve endangered medicinal and aromatic plants In vitro production of secondary metabolites in plant cell suspension cultures has been reported for various medicinal plants and bioreactors represent a key step toward the commercial production of secondary metabolites by means of plant biotechnology Addressing these key aspects the book contains 29 chapters divided into three sections Section 1 In vitro production of secondary metabolites Section 2 In vitro propagation genetic transformation and germplasm conservation Section 3 Conventional and molecular approaches

Exogenous Priming and Engineering of Plant Metabolic and Regulatory Genes Manish Kumar Patel,Lam-Son Phan Tran,Sonika Pandey,Avinash Mishra,2025-01-30 Exogenous Priming and Engineering of Plant Metabolic and Regulatory Genes Stress Mitigation Strategies in Plants provides insights into metabolic adjustment their regulation and the regulatory networks involved in plants responding to stress situations It contains comprehensive information combining mechanistic priming and engineering approaches from the conventional to those recently developed In addition the book addresses seed priming tolerance mechanisms pre and post treatment as well as sensory response and genetic manipulation From basic concepts to modern technologies and prevailing policies readers will find this book useful in enhancing their understanding of the area as well as helping in identifying approaches for future research Provides detailed information on developing stress tolerant crop varieties using two distinct approaches Highlights advancements in OMICS approaches for different crops Assists readers in designing and evaluating plan for future research

Agronomy, Breeding and Cytogenetic Factors Affecting Growth of *Stevia rebaudiana* Bertoni Raji Akintunde Abdullateef, 2013 *Stevia rebaudiana* bertoni is known for its production of sweet glycosides an alternative to sugar due to its zero calorie and strong health and dietary implications The cultivation of stevia in this country is hampered by few factors First stevia produces flowers at early stage under Malaysia photoperiod condition thus leading to poor leaf development where the leaves are the most needed for sweetener extraction In addition stevia accessions do not grow well under local condition and there has been no breeding work to develop suitable cultivars Moreover no suitable vegetative propagation techniques have been established leading to high production cost Also seed germination is very low making production of plant materials difficult and expensive Lastly among the sweet glycosides rebaudioside A is more preferred but the content is low compared to stevioside in natural varieties Thus the project was undertaken to study the agronomy breeding and cytogenetic factors affecting growth of *Stevia rebaudiana* Bertoni under Malaysian condition Firstly agronomic studies were conducted on the effects of stem cutting types position and IBA on rooting YAS MS012 cuttings treated with IBA concentration of 2.3 mM performed best Under light treatment condition YAS MS012 treated with red light showed highest rooting quality and IBA treatment may not be necessary Pollen viability test using cotton blue in lactophenol and germinability test using boric acid in collected accessions showed high pollen viability range from 87 to 93 % The pollen germinability ranged from 62 to 74 % Boric acid concentration of 0.25 mg/ml was optimal Seed viability using 1% tetrazolium chloride was found to be 68.67 % whereas germinability using red and white lights was found to be 41 and 31 % respectively New technique improved seed germination to 67.33 % than the initial technique which germinated a maximum of 41 % seeds ANOVA showed there are significant differences between treatments at p **Stevioside** Sirshendu De, Sourav Mondal, Suvrajit Banerjee, 2013-08-20 Stevioside is one of the naturally occurring sweeteners belonging to the diterpene
