Pickles on Ice

Read the environmental essay.
Then follow the directions in the Text Marking box.

Do thoroughfares in your area get over ice in winter? Are sidewalks treacherous for walking? If so, would you ever think to grab a jar of pickles?

icy roads can be dangerous. Cities and towns spend heavily each winter spreading rock salt on roads to melt the ice. However, the problem with using rock salt is that it is hazardous to the environment. Salt seeps into the ground and into our fresh water, damaging plants and trees. Salt also harms wildlife and pets.

Think challenge has pushed transportation departments in some states to seek safer materials to use. One solution is to replace rock salt with brine. Brine is salty water. It is found in the juice of beets, pickles, potatoes, and cherries. Brine has three advantages over rock salt.

First, it causes less harm to the environment. It also works better than rock salt at very low temperatures. Moreover, using brine saves money for taxpayers.

Indiana has begun to use beet brine to melt ice on its roadways. Surfaces in Tennessee are being de-iced with potato brine. New Jersey ice is being melted with pickle brine. Cherry brine is now used to combat Wisconsin's icy streets. Yet, states may have found an effective solution to a slippery problem.

Trucks do things to melt ice in winter.
