*IBM SmartCloud: Becoming a Cloud Service Provider* Joe McIntyre, IBM Redbooks, 2012-12-13 Cloud computing opens a broad range of business opportunities across the computing industry and enables companies in other industries to provide services to their employees customers and partners Cloud computing provides a compelling approach to addressing this opportunity The IBM SmartCloud™ for Service Providers portfolio can dramatically lower the business and technical barriers of entry to cloud computing Companies rely on their business applications and systems as an integral part of their business They can expand the business value of

their applications and systems by using cloud computing to enable delivery of these functions as services Companies have various options when adopting cloud computing They can Use existing service providers to operate services on their behalf Implement hybrid solutions that extend existing applications through integration with cloud services Add cloud service hosting capability to their existing facilities For ecosystem partners cloud computing provides compelling capabilities that ease deployment and long term management and maintenance Equally important cloud computing facilitates a more flexible business and technical environment This environment can expand contract and adapt as services are added removed and evolve The cloud replaces physical activity associated with change and change management by creating a fluid environment that adapts through automation This IBM Redguide™ publication describes the business and technology choices companies make when entering the cloud service provider space It introduces various cloud service provider business models and shows how to apply them to your business This guide introduces the IBM CCRA cloud service provider adoption pattern providing guidance about the definition architecture and deployment of cloud computing environments Two cloud service provider deployment scenarios are highlighted throughout the guide and they reflect the two most common starting points for service providers entering the cloud computing marketplace The guide culminates with details about these deployment scenarios and showing how they can be deployed today

**Reinvention of Infosys** Praveen Gupta, 2017 June 2014 spelled an end of an era for Indian software services company Infosys Ltd Mr N R Narayana Murthy the 67 year old co founder and then executive chairman of the company announced that he along with two more co founders S Gopalakrishnan and S D Shibulal was leaving He felt that to take the company to greater heights in the wake of new challenges in the information technology IT industry bold moves were needed The intent was to allow a new leader to bring the company into the future and become a truly competitive firm New chief executive officer Dr Vishal Sikka was considered more familiar with newer paradigms like big data cloud infrastructure artificial intelligence and automation As a leader he was expected to win bigger deals renew core services and help Infosys to differentiate on value rather than cost He needed to work on transformational initiatives such as processes onboarding training marketing employees on bench corporate culture and customer centricity Moreover the clients of IT services globally were facing extreme cost pressures due to disruptions which added pricing pressures on firms like Infosys The firm needed to scale up innovation and drive strategy to be globally competitive

**IBM SmartCloud: Building a Cloud Enabled Data Center** Pietro Iannucci, Manav Gupta, IBM Redbooks, 2013-05-21 Organizations are looking for ways to get more out of their already strained IT infrastructure as they face new technological and economic pressures They are also trying to satisfy a broad set of users internal and external to the enterprise who demand improvements in their quality of service QoS regardless of increases in the number of users and applications Cloud computing offers attractive opportunities to reduce costs accelerate development and increase the flexibility of the IT infrastructure applications and services Infrastructure as a service IaaS is the typical starting point for most organizations when moving to a cloud

computing environment IaaS can be used for the delivery of resources such as compute storage and network services through a self service portal With IaaS IT services are delivered as a subscription service eliminating up front costs and driving down ongoing support costs IBM has defined the Cloud Computing Reference Architecture CCRA based on years of experience of working with customers who have implemented cloud computing solutions The IBM CCRA is a blueprint or guide for architecting cloud computing implementations This IBM Redguide™ publication highlights the Cloud Enabled Data Center adoption pattern and describes how you can use it to define an IaaS solution This guide is intended for chief technology officers data center architects IT architects and application architects who want to understand the cloud computing infrastructure necessary to support their applications and services by using an IaaS solution It explains the technical and business benefits of a Cloud Enabled Data Center solution It introduces a Cloud Enabled Data Center maturity model where each maturity level corresponds to an increase in the degree of automation and the cloud computing capabilities that are available In addition this guide describes the architectural framework provided by the IBM CCRA and explains details about the Cloud Enabled Data Center adoption pattern *IBM® SmartCloud® Essentials* Edwin Schouten, 2013-12-20 A practical user friendly guide that provides an introduction to cloud computing using IBM SmartCloud along with a thorough understanding of resource management in a cloud environment This book is great for anyone who wants to get a grasp of what cloud computing is and what IBM SmartCloud has to offer If you are an IT specialist IT architect system administrator or a developer who wants to thoroughly understand the cloud computing resource model this book is ideal for you No prior knowledge of cloud computing is expected **Cloud Services, Networking, and Management** Nelson L. S. da Fonseca, Raouf Boutaba, 2015-03-24 Cloud Services Networking and Management provides a comprehensive overview of the cloud infrastructure and services as well as their underlying management mechanisms including data center virtualization and networking cloud security and reliability big data analytics scientific and commercial applications Special features of the book include State of the art content Self contained chapters for readers with specific interests Includes commercial applications on Cloud video services and games **Service Descriptions for Cloud Services - The Customer's Perspective** Patrick Hoberg, Jan Wollersheim, Helmut Krcmar, 2012 Traditional IT outsourcing is a supplier business Outsourcing providers seek to engage in sustainable long term business relationships providing their clients with customized IT services The client relies on the Request for Information RFI the Request for Proposal RFP as well as the due diligence to receive required information directly from potential service providers Triggered by the progressive adoption of the cloud computing paradigm the traditional value chain in the IT outsourcing industry is breaking up and gets replaced by a complex value network Cloud computing is a system business where IT services are highly standardized and created for an anonymous market rather than being customer specific As part of this development customers unilaterally provision standardized IT services via online distribution platforms like Google Apps Market and Force.com Clients who want to obtain

IT services via the cloud have to gather all relevant information for decision making their selves online rendering RFIs and RFPs as well as due diligence inapplicable Prerequisite for the widespread use of cloud services by organizations are cloud service descriptions covering all information required in order to compare and select services Analysing firms information demands associated with service and provider selection in IT outsourcing this paper identifies the information needed by organizations for cloud service selection A catalogue of description elements required by the client is compiled Using the Unified Service Description Language USDL as a framework our results are clustered into eight description elements which are related to the business the operational and the technical domain

*Protecting IaaS Clouds Through Control of Cloud Services* Yuqiong Sun,2016 Infrastructure as a Service IaaS clouds are gaining more popularity these days as they allow enterprises to dynamically scale their IT infrastructure according to business needs However such benefits come with the inherent security risk of resource sharing a cloud user needs to share the same set of resources offered by cloud vendors with other cloud users who potentially can be adversaries to the user An adversary controlling shared resources through vulnerabilities in hypervisors malicious insiders or side channels can compromise benign users data that co locates with the adversary Among various attack vectors one particular vector that was often overlooked previously is the cloud platform itself namely various cloud services that implement the cloud In this dissertation we identify a class of previously overlooked attacks that can be launched via compromised cloud services and explore the design of a framework to mitigate these attacks Cloud services are modular programs that work together to provision schedule and manage users data e g VM in cloud They are sophisticated software that may contain vulnerabilities By exploiting these vulnerabilities adversaries can launch attacks against benign cloud users In addition cloud service collaborate with each other when performing a cloud user s operation Adversary may leverage such cloud service interaction to propagate attacks across cloud services Such attacks originating from vulnerable cloud services are challenging to prevent for few reasons First cloud services act on behalf of concurrent cloud users Thus a vulnerability in a cloud service may impact all the cloud users Second cloud services are often privileged on their hosting nodes Thus an adversary controlling a cloud service may further escalate her privilege and control the entire cloud node Third cloud services trust each other Thus after compromising one cloud service or node an adversary can easily propagate attacks to other cloud services or nodes across network causing a cloud wide compromise of users data This dissertation takes three steps to protect users data in IaaS clouds against vulnerable cloud services First we perform an in depth security analysis on the nature of cloud service vulnerabilities and how an adversary may leverage them to compromise the data security of benign cloud users We hypothesize that attacks originating from vulnerable cloud services can be mitigated by a mandatory security mechanism that confines cloud services data access according to the cloud operation they are performing Second we present the CloudArmor a security mechanism that limits cloud services data access to a state machine model that is constructed based runtime analysis of cloud services We found that without requiring any code modifications of cloud services we can greatly restrict the freedom offered to an adversary when launching attacks via compromised cloud services with high precision Third we present Pileus a new design of cloud platform for running cloud services in a way that adversaries cannot obtain unauthorized access to benign cloud users data through exploiting vulnerabilities in those cloud services In Pileus cloud

services run as ephemeral event handlers that are confined to individual users permissions Through enforcing a decentralized information flow control DIFC Pileus reduces the amount of cloud service code as well as the number of cloud nodes that a user needs to trust in order to defend against attacks launched by adversaries during a cloud operation Our proof of concept implementation and evaluation demonstrated that such design can systematically block information flow vulnerabilities reported in OpenStack including five that were newly reported after Pileus was deployed while relying on a TCB of cloud nodes that is orders of magnitude smaller than original OpenStack The work in this dissertation thus provides a principled starting point to protect cloud users data against vulnerable cloud services during cloud operations thus reducing vectors adversaries have to launch attacks in IaaS clouds
