 PERFORMANCE STRAIGHTFORWARD METHODS TO DESIGN AND OPERATE AIRCRAFT TO MEET PERFORMANCE  
 SPECIFICATIONS Aircraft Performance sets forth a group of tested and proven methods needed to determine the  
 performance of an aircraft The central theme of this book is the energy method which enhances understanding of the  
 standard methods and provides accessibility to advanced topics As a result readers gain a thorough understanding of the  
 performance issues involved in operating an aircraft in an efficient and economic manner While covering all the standard  
 topics level and climbing flight range and endurance take off and landing and maneuvering flight the book focuses on the  
 energy methods applied to path performance analysis Throughout the text numerous examples from both the commercial and

military sectors show readers how the concepts and calculations are applied to real life situations Problems ranging from basic to complex test the readers understanding and provide an opportunity for essential practice To help focus the readers attention on core issues this text assumes that aerodynamics and propulsion are known inputs Special appendices are provided to present some aerodynamic and propulsive equations and data In general topics are separated into horizontal and vertical plane approaches Following an introduction and overview basic energy concepts are employed to obtain a fundamental performance equation This text with its extensive use of examples and problem sets is ideal for upper level undergraduate and graduate students in engineering It also serves as a reference for design engineers in both military and industrial sectors who want a set of clear and reliable methods to calculate aircraft performance
