Broadhurst, 2021-04-26 As we become more and more of a global trading world the challenges of leading and managing within this turbulent environment and its associated complex interconnected markets and disconnected relationships are indisputable so just how far can any change requirements be practically engaged with whilst also keeping the employee at the organisation's central core Today's business world cries out for people who can lead with a cross cultural global perspective who can lead from the heart as well as the mind and address and manage problems on not just an integrated local level but also with a healthy holistic perspective The subject of spirituality has long been discussed within academic research but there still seems to be a misunderstanding and stagnation of both its real meaning and application amongst business academics the population and organisations alike This book aims to provide a realistic message to help those who are looking for some answers for those who are looking for a way to advance their own skill set and progress both their careers and the organisation's current standing to move from being confused and insecure about strategies and tactics to positively contributing to not only their own but also to the employees well being and the business's overall purpose and intention By basing the content upon real and relevant interesting modern day perspectives applications requirements opportunities and benefits all combined into a manual for thought and a practical framework for action this book will significantly and realistically move the subject of spirituality forward This book will be of interest to researchers academics and students with a special interest in the positive influence of spirituality within the workplace and everyday healthy living

How to Repair Your Motorcycle Charles Everitt, 2007

Chrysler's Turbine Car Steve Lehto, Jay Leno, 2010-10-01 In 1964 Chrysler gave the world a glimpse of the future They built a fleet of turbine cars automobiles with jet engines and loaned them out to members of the public The fleet logged over a million miles the exercise was a raging success These turbine engines would run on any flammable liquid tequila heating oil Chanel 5 diesel alcohol kerosene If the cars had been mass produced we might have cars today that do not require petroleum derived fuels The engine was also much simpler than the piston engine it contained one fifth the number of moving parts and required much less maintenance The cars had no radiators or fan belts and never needed oil changes Yet Chrysler crushed and burned most of the cars two years later the jet car's brief glory was over Where did it all go wrong Controversy still follows the program and questions about how and why it was killed have never been satisfactorily answered Steve Lehto has interviewed all the surviving members of the turbine car program from the metallurgist who created the exotic metals for the interior of the engine to the test driver who drove it at Chrysler's proving grounds for days on end Lehto takes these first hand accounts and weaves them into a great story about the coolest car Detroit ever produced
