*Personal Wireless Communications* Marco Conti, 2003-09-12 This book constitutes the refereed proceedings of the IFIP TC6 8th International Conference on Personal Wireless Communications PWC 2003 held in Venice Italy in September 2003. The 49 revised papers presented together with 6 special track papers: 1 invited paper, 11 project descriptions, 7 work in progress reports and 8 novel ideas reports were carefully reviewed and selected from 115 submissions. The papers are organized in topical sections on: mobile computing, wireless access, sensor networks, transport protocols, performance models, WCDMA, ad hoc networks, wireless and mobile systems, cellular networks, IPv6, Bluetooth, and security, and cooperations in ad hoc networks.

**Pervasive Computing** Alois Ferscha, Friedemann Mattern, 2004-04-07 Welcome to the proceedings of PERVASIVE 2004, the 2nd International Conference on Pervasive Computing and the premier forum for the presentation and appraisal of the most recent and most advanced research results in all foundational and applied areas of pervasive and ubiquitous computing. Considering the half-life period of technologies and knowledge, this community is facing PERVASIVE is one of the most vibrant, dynamic, and evolutionary among the computer science related symposia and conferences. The research challenges, efforts, and contributions in pervasive computing have experienced a breathtaking acceleration over the past couple of years, mostly due to technological progress, growth, and a shift of paradigms in computer science in general. As for technological advances, a vast manifold of tiny embedded and autonomous computing and communication systems have started to create and populate a pervasive and ubiquitous computing landscape characterized by paradigms like autonomy, context awareness, spontaneous interaction, seamless integration, self-organization, ad hoc networking, invisible services, smart artifacts, and everywhere interfaces. The maturing of wireless networking, miniaturized information processing possibilities induced by novel microprocessor technologies, low power storage systems, smart materials, and technologies for motors, controllers, sensors, and actuators envision a future computing scenario in which almost every object in our everyday environment will be equipped with embedded processors, wireless communication facilities, and embedded software to perceive, perform, and control a multitude of tasks and functions.

**Mobile Entity Localization and Tracking in GPS-less Environments** Richard Fuller, Xenofon D. Koutsoukos, 2009-09-11 This book constitutes the refereed proceedings of the second International Workshop on Mobile Entity Localization and Tracking in GPS-less Environments MELT held in Orlando, Florida, USA, in September 2009, in conjunction with the 11th International Conference on Ubiquitous Computing Ubicomp 2009. MELT is a forum for the state-of-the-art technologies in mobile localization and tracking and novel applications of location-based services. The research contributions in these proceedings cover significant aspects of localization and tracking of mobile devices that include techniques suitable for smart phones and mobile sensor networks in both outdoor and indoor environments using diverse sensors and radio signals. Novel theoretical methods, algorithmic design, and analysis, application development, and experimental studies are presented in 14 papers that were

reviewed carefully by the program committee In addition three invited papers with topics on location determination using RF systems Cramer Rao Bound analysis for indoor localization and approaches targeting mobile sensor networks are also included in the proceedings The Art of Wireless Sensor Networks Habib M. Ammari, 2013-12-17 During the last one and a half decades wireless sensor networks have witnessed significant growth and tremendous development in both academia and industry A large number of researchers including computer scientists and engineers have been interested in solving challenging problems that span all the layers of the protocol stack of sensor networking systems Several venues such as journals conferences and workshops have been launched to cover innovative research and practice in this promising and rapidly advancing field Because of these trends I thought it would be beneficial to provide our sensor networks community with a comprehensive reference on as much of the findings as possible on a variety of topics in wireless sensor networks As this area of research is in continuous progress it does not seem to be a reasonable solution to keep delaying the publication of such reference any more This book relates to the second volume and focuses on the advanced topics and applications of wireless sensor networks Our rationale is that the second volume has all application specific and non conventional sensor networks emerging techniques and advanced topics that are not as matured as what is covered in the first volume Thus the second volume deals with three dimensional underground underwater body mounted and societal networks Following Donald E Knuth's above quoted elegant strategy to focus on several important fields The Art of Computer Programming Fundamental Algorithms 1997 all the book chapters in this volume include up to date research work spanning various topics such as stochastic modeling barrier and spatiotemporal coverage tracking estimation counting coverage and localization in three dimensional sensor networks topology control and routing in three dimensional sensor networks underground and underwater sensor networks multimedia and body sensor networks and social sensing Most of these major topics can be covered in an advanced course on wireless sensor networks This book will be an excellent source of information for graduate students majoring in computer science computer engineering electrical engineering or any related discipline Furthermore computer scientists researchers and practitioners in both academia and industry will find this book useful and interesting

**Perspectives of Information Systems** Vesa Savolainen, 1999-06-24 This book focuses on several issues in the essence of information systems and their development as well as advanced utilization of new information technology It includes both theoretical foundations and practical approaches for each topic and will prove useful both to scientists in the field of information system science and to practitioners in information systems development and use Many of the topics treated here have not appeared in the literature although they are becoming increasingly important in the development of information systems Topics covered include contingencies in IT decision making intelligent executive information systems dynamic performance evaluation of information systems exception handling in information systems metamethodology of information system development and mobile computing The outstanding feature of the book is its specific mixture of subjects under one

framework of thinking about information systems A useful book to researchers and systems developers the book can also form the basis of an advanced course in information systems development

**Mobile and Ubiquitous Systems: Computing, Networking, and Services** Kan Zheng, Mo Li, Hungbo Jiang, 2013-08-15 This book constitutes the thoroughly refereed post conference proceedings of the 9th International ICST Conference on Mobile and Ubiquitous Systems Computing Networking and Services MobiQuitous 2012 held in Beijing China Denmark in December 2012 The revised full papers presented were carefully reviewed and selected from numerous submissions They cover a wide range of topics such as localization and tracking search and discovery classification and profiling context awareness and architecture location and activity recognition The proceedings also include papers from the best paper session and the industry track as well as poster and demo papers
