

# Control and Field Instrumentation Documentation

To successfully work with (and design) control systems, it is essential to understand the documents that are typically used to illustrate process control and associated field instrumentation. The documentation of process control and associated field instrumentation is normally created by the engineering firm that designs and constructs the plant. The company that commissioned the plant may have an internal documentation standard the engineering firm will be required to follow.

For an older installation, the plant documentation may only exist as a series of paper documents. Today the documentation created for a new or upgraded plant is produced electronically using automated design tools and software. The tools and software selected by the plant or engineering firm for initial plant design or upgrade will influence the documentation format and how documentation is maintained at the plant site. Also, the selection of the control system determines to what extent the system is self-documenting.

**Self-documenting** – the automatic creation of documents that follow defined conventions for naming and structure.

If the documentation generated by the control system does not follow standards that have been established for process control and instrumentation, then it may be necessary to manually create this documentation.

**Control System** - A component, or system of components functioning as a unit, which is activated either manually or automatically to establish or maintain process performance within specification limits.
