Behavioral Accounting The Research And Practical Issues:

Behavioral Accounting Ahmed Riahi-Belkaoui, 1989-05-23 This book is a useful, readable and intelligent survey of the emerging field of behavioral accounting, a field that is doing much to narrow the gap between accounting and behavioral scholars and practitioners. *Personnel Psychology* The relatively new field of behavioral accounting relies on the application of behavioral concepts from the social sciences for an understanding of the forces that underlie the accounting environment. Here Belkaoui presents the first comprehensive survey of behavioral accounting theories and findings, organizing them into a systematic framework for the further study of behavioral accounting issues and questions. The result is a new understanding of the behavioral environment of accounting and a guide to solving practical behavioral problems that result from the preparation and use of accounting information. As Belkaoui demonstrates, the quality of accounting information is often adversely affected by human perceptions, attitudes, predispositions, and other behavioral characteristics. Belkaoui fully explores the behavioral underpinnings of the problem by examining the behavioral dimensions of a wide range of accounting issues and practices, including contingency approaches to the design of accounting systems, functional and data fixation, the practice of slack accounting, and language, goal setting, participative budgeting, and performance. The human resource considerations in public accounting firms and finally cultural determinism in accounting. By offering both a realistic appraisal of the theories behind behavioral accounting and a cogent statement of the questions still left unanswered, Belkaoui makes a major contribution to the ongoing inquiry into the influence of behavioral factors on accounting practice. *Neuroeconomics and the Decision-Making Process* Christiansen, Bryan, 2016-03-17 Neuroeconomics has emerged as a field of study with the goal of understanding the human decision-making process and the mental consideration of multiple outcomes based on a selected action. In particular, neuroeconomics emphasizes how economic conditions can impact and influence the decision-making process and alternately how human actions have the power to impact economic conditions. Neuroeconomics and the Decision-Making Process presents the latest research on the relationship between neuroscience, economics, and human decision-making, including theoretical foundations, real-world applications, and models for implementation. Taking a cross-disciplinary approach to neuroeconomic theory and study, this publication is an essential reference source for economists, psychologists, business professionals, and graduate-level students across disciplines. *Accounting and Corporate Reporting* Soner Gokten, 2017-09-20 We have spent a great deal of time on the continued development of accounting and auditing standards, which are used as a primary component of corporate reporting to reach today's financial reporting framework. However, is it possible to say that currently financial statements provide full and prompt disclosure? Or will they still be useful as a primary element with their current structures in corporate reporting? Undoubtedly, we are deeply concerned about these issues in recent times. This volume contains chapters to discuss the today's and tomorrow's accounting and corporate reporting phenomena in a comprehensive and multidimensional way. Therefore, this book is organized into six sections.
