Cost Effectiveness And Productivity Kpis Eurocontrol:

Institutional Reform of Air Navigation Service Providers Rui Neiva, 2015-10-30 *Institutional Reform of Air Navigation Service Providers* deals with the changes that have taken place in this major technologically progressive industry as many countries moved away from direct provision by the government to forms of corporate or private provision The author provides an up to date institutional and economic analysis of air navigation service providers efforts to reform their governance and funding structures under these changes The book discusses air navigation service providers in great detail with a focus on the historical evolution of the industry s institutional and regulatory frameworks as well as the ongoing developments in the industry e g the Single European Sky in Europe and NextGen in the US The author departs from the more conventional quasi descriptive analysis by performing economic and econometric analyses of the industry that explicitly include institutional variables e g to explore whether the nature of ownership can be associated with different economic efficiency outcomes The result is a rigorous assessment of the structures of various air navigation service providers strengthened by the use of case studies and policy analysis of potential reform The theme and scope of this book will appeal to anyone interested in the institutional and regulatory history of air navigation service providers and its accessible approach will appeal to policy makers and professionals as well as people who are interested more broadly in economic regulation

Advancing Edge Artificial Intelligence Ovidiu Vermesan, Dave Marples, 2024-03-04 The intersection of AI the Internet of Things IoT and edge computing has kindled the edge AI revolution that promises to redefine how we perceive and interact with the physical world through intelligent devices Edge AI moves intelligence from the network centre to the devices at its edge entrusting these endpoints to analyse data locally make decisions and provide real time responses Recent advances in power efficient high performance embedded silicon make edge AI a viable proposition albeit one requiring new distributed architectures and novel design concepts Moving decision making closer to the edge makes responses faster and systems more reliable while the constant pressure to reduce network bandwidth demand and the need to contain spiralling data storage and operations costs help justify the engineering investment necessary to embrace this new paradigm Moving to decentralised operation opens the door to a multitude of novel applications covering immersive technologies and autonomous systems across fields as diverse as healthcare and industrial automation personal assistance and prognostics surgery and process control In the best tradition of systems engineering the first stage of this transition process is understanding the application domain for edge AI deployment the system context This book presents some key topics and early thinking from the EdgeAI project covering data backhaul technologies lifecycle management mechanisms for developing AIs at the edge and techniques for interacting with those AIs It provides examples of application domains before concluding with a review of how edge AI systems can be understood by their users It also examines and presents new results based on current investigations and activities in edge AI technologies considering the future trends in autonomic systems hyperautomation AI
