Abstract: Numerous studies have been conducted recently on the connections between gratitude and academic engagement, life pleasure, and psychological health. It has been discovered that gratitude, which is a positive emotion that results from appreciating the wonderful things in life, is linked to a number of favorable outcomes in pupils.

According to research, students who practice thankfulness are more engaged in academic activities such as attending class, engaging in debates, and finishing homework. They also have better levels of life satisfaction and psychological well-being because gratitude allows people to focus on the positive aspects of their lives and build a more positive attitude on their experiences.

It also helps students to cope with stress and adversity, by promoting resilience and enhancing their ability to find meaning and purpose in difficult situations.

Overall, the research suggests that gratitude is a powerful tool that can help students thrive academically, emotionally, and socially. Practicing gratitude regularly, through techniques such as journaling or expressing gratitude to others, can promote positive outcomes and enhance the overall well-being of students.

Earlier research on psychological constructs have a tendency to focus on the possible effects of negative emotions on personal behaviors and interpersonal relationships (Greenglass, 2006). On the other hand, in recent years psychological research has tended to become more interested in positive feelings and the emotions of well-being (Van Hoon, 2007). According to Seligman and Csikszentmihalyi (2000), positive individual traits and adaptive constructs, human strengths, and virtues such as subjective happiness, hope, optimism, and courage are very important for improving one's quality of life. Positive psychology aims to identify variables (e.g., behaviors, cognitions, emotions, experiences, and character traits) that contribute to healthy development in individuals.

This positive perspective emerged from accumulating evidence showing that the absence of psychological disorders and disease is not necessarily synonymous with mental health (Keyes, 2002). The positive psychology approach is a preventative one in that it seeks to promote and enhance well-being rather than wait to treat mental illness (Seligman & Csikszentmihalyi, 2000). As such,
