Balaras,2021-01-12 The book Building Energy Audits Diagnosis and Retrofitting is a collection of twelve papers that focus on the built environment in order to systematically collect and analyze relevant data for the energy use profile of buildings and extended for the sustainability assessment of the built environment The contributions address historic buildings baselines for non residential buildings from energy performance audits and from in situ measurements monitoring and analysis of data and verification of energy saving and model calibration for various building types The works report on how to diagnose existing problems and identify priorities assess and quantify the opportunities and measures that improve the overall building performance and the environmental quality and well being of occupants in non residential buildings and houses Several case studies and lessons learned from the field are presented to help the readers identify quantify and prioritize effective energy conservation and efficiency measures Finally a new urban sustainability audit and rating method of the built environment addresses the complexities of the various issues involved providing practical tools that can be adapted to match local priorities in order to diagnose and evaluate the current state and future scenarios towards meeting specific sustainable development goals and local priorities **Unconventional Fossil Fuels** The Emirates Center for Strategic Studies and Research,2014-10-01 With the exploitation of unconventional fossil fuels such as shale oil and gas becoming both economically and technically more feasible and developments of great importance occurring in the pursuit of

other unconventional resources we are today witnessing what some have termed a revolution in the means of hydrocarbon extraction. Such developments will undoubtedly have major impacts on the dynamics of global energy supply and demand, energy markets and prices and on the relative status of traditional producers and consumers. The promise of a greater abundance of unconventional hydrocarbon resources has also raised a number of pressing questions and issues relating to the environmental effects of the continued exploitation of fossil fuels. These include the potential for and consequences of further legislation to lower carbon emissions implemented by concerned nations around the world as well as the fate of related legislative and economic incentives for the development of renewable energy technologies. Based on the proceedings of the ECSSR 19th Annual Energy Conference, *Unconventional Fossil Fuels: The Next Hydrocarbon Revolution* brings together a group of distinguished experts drawn from industry and academia to provide a strategic outlook for forthcoming developments in the field of unconventional hydrocarbon energy sources. The resultant papers compiled in this volume provide both professional and academic perspectives on these highly significant developments in the exploitation of unconventional fossil fuel resources as well as their potential consequences for both producers and consumers.

Extracting Profit Lee Wengraf, 2018-02-19. Extracting profit explains why Africa in the first decade and a half of the twenty-first century has undergone an economic boom. This period of Africa rising did not lead to the creation of jobs but has instead fueled the growth of the extraction of natural resources and an increasingly wealthy African ruling class.

Renewable Gas Jo Abbess, 2016-04-29. The author looks at the prospects for a transition from natural gas to low carbon gas which could take several decades and at how this will depend on the evolution of the fossil fuel industry. She investigates the technologies and energy systems for making the best use of renewable gas resources.

Africa's Booming Oil and Natural Gas Exploration and Production David Edward Brown, 2013. Two key long-term energy trends are shifting the strategic balance between the United States and China, the world's superpower rivals in the 21st century: first, a domestic boom in U.S. shale oil and gas is dramatically boosting America's energy security; second, the frenetic and successful search for hydrocarbons in Africa is making it an increasingly crucial element in China's energy diversification strategy. America's increasing energy security and China's increased dependence on energy imports from Africa and the Middle East until well past 2040, despite its own shale discoveries, will make Beijing's own increasing energy insecurity be felt even more acutely, pushing the People's Liberation Army to accelerate adoption of a two-ocean military strategy that includes an enduring presence in the Indian Ocean as well as the Pacific Ocean.

Committee on United States Energy Outlook. Energy Demand Task Group, 19?? **World Energy Outlook 2014 Projections to 2040** Ian Cronshaw, 2015 The paper presents data and results from the World Energy Outlook WEO 2014 published by the International Energy Agency IEA Over the period to 2040 total energy use is projected to grow by almost 40 per cent while the share of fossil fuels in the energy mix falls Nonetheless these fossil fuels remain the dominant sources of energy with oil coal and gas each accounting for around one quarter of global energy needs by 2040 Increasingly modern renewables are projected to replace fossil fuels especially in the power sector Around 93 per cent of the projected increased primary energy demand comes from non OECD countries with two thirds coming from developing Asia led by China By 2025 China could account for almost a quarter of global energy use doubling its share since the turn of the century After 2025 India and other Asian countries surpass China as the main centres of energy demand growth The IEA's WEO 2014 concludes that even taking into account ambitious policy measures announced as of mid to late 2014 energy growth projections place the world on a path consistent with a long term temperature increase of 3.6 degrees Urgent action is required if the world's energy systems are to be steered towards lower greenhouse gas emissions **Riding the Energy Transition** Reda Cherif, Fuad Hasanov, Aditya Pande, 2017-05-22 Recent technological developments and past technology transitions suggest that the world could be on the verge of a profound shift in transportation technology The return of the electric car and its adoption like that of the motor vehicle in place of horses in early 20th century could cut oil consumption substantially in the coming decades Our analysis suggests that oil as the main fuel for transportation could have a much shorter life span left than commonly assumed In the fast adoption scenario oil prices could converge to the level of coal prices about 15 per barrel in 2015 prices by the early 2040s In this possible future oil could become the new coal *World Energy Outlook*, 1981 *Annual Energy Outlook 2014* John J. Conti, 2014-06-27 Presents long term annual projections of energy supply demand and prices focused on the U S through 2040 based on results from the Energy Information Administration's EIA's Nat Energy Modeling System NEMS Projections focus on the factors that shape the U S energy system over the long term Key results Growing domestic production of natural gas and oil continues to reshape the U S energy economy Industrial production expands over the next 10 to 15 years due to the competitive advantage of low natural gas prices Higher oil and natural gas production could spur

even more industrial growth and lower the use of imported petroleum Improvement in light duty vehicle LDV efficiency leads to a sharp decline in LDV energy use Increased use of natural gas for electricity generation and transportation Improved efficiency of energy use in the residential and transportation sectors and a shift away from more carbon intensive fuels such as coal for electricity generation help stabilize U S energy related carbon dioxide CO2 emissions Figures and tables This is a print on demand report **U.S. Energy Outlook: Energy demand** National Petroleum Council.
