Combinatorics and Commutative Algebra Richard Stanley,1996-03-01 Stanley represents a broad perspective with respect to two significant topics from Combinatorial Commutative Algebra 1 The theory of invariants of a torus acting linearly on a polynomial ring and 2 The face ring of a simplicial complex In this new edition the author further develops some interesting properties of face rings with application to combinatorics **Combinatorics and Commutative Algebra** Richard P. Stanley,2007-12-13 Some remarkable connections between commutative algebra and combinatorics have been discovered in recent years This book provides an overview of two of the main topics in this area The first concerns the solutions of linear equations in nonnegative integers Applications are given to the enumeration of integer stochastic matrices or magic squares the volume of polytopes combinatorial reciprocity theorems and related results The second topic deals with the face ring of a simplicial complex and includes a proof of the Upper Bound Conjecture for Spheres An introductory chapter giving background information in algebra combinatorics and topology broadens access to this material for non specialists New to this edition is a chapter surveying more recent work related to face rings focusing on applications to f vectors

The Mathematics of Chip-Firing Caroline J. Klivans,2018-11-15 The Mathematics of Chip firing is a solid introduction and overview of the growing field of chip firing It offers an appreciation for the richness and diversity of the subject Chip firing refers to a discrete dynamical system a commodity is exchanged between sites of a network according to very simple local rules Although governed by local rules the long term global behavior of the system reveals fascinating properties The Fundamental properties of chip firing are covered from a variety of perspectives This gives the reader both a broad context of the field and concrete entry points from different backgrounds Broken into two sections the first examines the fundamentals of chip firing while the second half presents more general frameworks for chip firing Instructors and students will discover that this book provides a comprehensive background to approaching original sources Features Provides a broad introduction for researchers interested in the subject of chip firing The text includes historical and current perspectives Exercises included at the end of each chapter About the Author Caroline J Klivans received a BA degree in mathematics from Cornell University and a PhD in applied mathematics from MIT Currently she is an Associate Professor in the Division of Applied Mathematics at Brown University She is also an Associate Director of ICERM Institute for Computational and Experimental Research in Mathematics Before coming to Brown she held positions at MSRI Cornell and the University of Chicago Her research is in algebraic geometric and topological combinatorics **Combinatorial, Computational, and Applied Algebraic Geometry** Serkan Ho?ten,Diane Maclagan,Frank Sottile,2025-10-01 This volume consists of surveys on topics to which Bernd Sturmfels has contributed over his mathematical career invariant theory Gr bner bases toric ideals and varieties algebraic methods in discrete and convex optimization hypergeometric systems algebraic statistics likelihood geometry tropical geometry chemical reaction networks numerical methods in algebraic geometry sums of squares tropical geometry

tensors and algebraic vision Each article gives a gentle introduction to the topic Many contributions summarize the state of the art in each subject The volume is perfect for anyone who wishes an entry point to any one of these diverse topics

Pattern Recognition on Oriented Matroids Andrey O. Matveev,2017-09-11 Pattern Recognition on Oriented Matroids covers a range of innovative problems in combinatorics poset and graph theories optimization and number theory that constitute a far reaching extension of the arsenal of committee methods in pattern recognition The groundwork for the modern committee theory was laid in the mid 1960s when it was shown that the familiar notion of solution to a feasible system of linear inequalities has ingenious analogues which can serve as collective solutions to infeasible systems A hierarchy of dialects in the language of mathematics for instance open cones in the context of linear inequality systems regions of hyperplane arrangements and maximal covectors or topes of oriented matroids provides an excellent opportunity to take a fresh look at the infeasible system of homogeneous strict linear inequalities the standard working model for the contradictory two class pattern recognition problem in its geometric setting The universal language of oriented matroid theory considerably simplifies a structural and enumerative analysis of applied aspects of the infeasibility phenomenon The present book is devoted to several selected topics in the emerging theory of pattern recognition on oriented matroids the questions of existence and applicability of matroidal generalizations of committee decision rules and related graph theoretic constructions to oriented matroids with very weak restrictions on their structural properties a study in which in particular interesting subsequences of the Farey sequence appear naturally of the hierarchy of the corresponding tope committees a description of the three tope committees that are the most attractive approximation to the notion of solution to an infeasible system of linear constraints an application of convexity in oriented matroids as well as blocker constructions in combinatorial optimization and in poset theory to enumerative problems on tope committees an attempt to clarify how elementary changes one element reorientations in an oriented matroid affect the family of its tope committees a discrete Fourier analysis of the important family of critical tope committees through rank and distance relations in the tope poset and the tope graph the characterization of a key combinatorial role played by the symmetric cycles in hypercube graphs Contents Oriented Matroids the Pattern Recognition Problem and Tope Committees Boolean Intervals Dehn Sommerville Type Relations Farey Subsequences Blocking Sets of Set Families and Absolute Blocking Constructions in Posets Committees of Set Families and Relative Blocking Constructions in Posets Layers of Tope Committees Three Tope Committees Halfspaces Convex Sets and Tope Committees Tope Committees and Reorientations of Oriented Matroids Topes and Critical Committees Critical Committees and Distance Signals Symmetric Cycles in the Hypercube Graphs   ,2007   <u>International Books in Print</u> ,1997   **Subject Guide to Books in Print** ,1997   *Novye inostrannye knigi, vypisannye BAN SSSR v ... godu* ,1989
