**Commercial Aircraft Projects** Hans-Henrich Altfeld, 2016-09-19 When it comes to very highly complex commercially funded product development projects it is not sufficient to apply standard project management techniques to manage and keep them under control. Instead they need a project management approach which is perfectly adapted to their complex nature. This however may generate additional cost and a dilemma arises because in commercially driven product developments there is the natural tendency to limit the management related costs. The development of a new commercial aircraft is no exception. In fact it can be regarded as an extreme example of this kind of project. This is why it is especially useful to analyse the project management capabilities and practices needed to manage them. Cost reductions can still be achieved by concentrating on the essential elements of some project management disciplines to maintain their principal strengths and combining them in a pragmatic way on the basis of an integrated architecture. This book goes beyond descriptions of management disciplines found elsewhere in its treatment of the architecture integration necessary to interlink product process and resources data. Only with this connectedness can the interoperation of the management essentials yield maximum efficiency and effectiveness. **Commercial Aircraft Projects: Managing the Development of Highly Complex Products** proposes an integrated architecture and details step by step how it can be used for the management of commercial aircraft development projects. The findings can also be applied to other industrial sectors that produce complex hardware based on design inputs.

**Aerospace Strategic Trade** Philip K. Lawrence, Derek Braddon, 2017-03-02 The U S economy is generally considered to run on free market or laissez faire principles implying that U S policy makers do not provide government support for industrial or commercial sectors While mostly true it is not the case with strategic industries such as aerospace Support for the aerospace sector has been viewed as essential because aerospace technologies have been the material backbone of U S security systems But American historic dominance in commercial aerospace and particularly the large commercial aircraft sector arose on the back of defence technology paid for by the US government Aerospace Strategic Trade analyses the subsidy of the U S large commercial aircraft LCA industry and redefines the terms of the Airbus Boeing subsidy debate This is achieved by tracking the benefits to Boeing of the Research and Technology contracts granted by the DoD and NASA The book is characterized by a new level of methodological precision in the database upon which the factual claims rest and the analysis derives from an exhaustive search of U S public databases and also data on federal R D contracts obtained under the Freedom of Information Act FOIA in the USA The overall analysis brings together these two approaches and provides a balanced and highly informative account of U S federal funding of the American large commercial aircraft sector This book is of interest to academics industrialists and government officials concerned with the aerospace industry to managers and executives in the aerospace industry
