**Artificial Intelligence and Online Engineering** Michael E. Auer, Samir A. El-Seoud, Omar H. Karam, 2022-10-14. Nowadays, online technologies are the core of most fields of engineering and the whole society and are inseparably connected, for example, with Internet of Things, Industrial Internet of Things, Industry 4.0, Online Biomedical Engineering, Data Science, Machine Learning, and Artificial Intelligence, Cross Mixed Reality, and Remote Working Environments, to name only a few. Since the first REV conference in 2004, we tried to focus on the upcoming use of the Internet for engineering tasks and the opportunities as well as challenges around it. Consequently, the motto of this year's REV2022 was Artificial Intelligence and Online Engineering. In a globally connected world, the interest in online collaboration, teleworking, remote services, and other digital working environments is rapidly increasing. In response to that, the general objective of this conference is to contribute and discuss fundamentals, applications, and experiences in the field of Online and Remote Engineering, Virtual Instrumentation, and other related new technologies like Cross Reality, Data Science, Big Data, Internet of Things, Industrial Internet of Things, Industry 4.0, Cyber Security, and M2M Smart Objects. Another objective of the conference is to discuss guidelines and new concepts for engineering education in higher and vocational education institutions, including emerging technologies in learning, MOOCs, MOOLs, and Open Resources. REV2022 was the 19th in a series of annual events concerning the area of Online Engineering. It has been organized in cooperation with The British University in Egypt (BUE) Cairo as a hybrid event from February 28 until March 02, 2022.

**Teaching and Learning Online** Franklin S. Allaire, Jennifer E. Killham, 2022-04-01. Science is unique among the disciplines since it is inherently hands-on. However, the hands-on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we, as science teachers, deliver high-quality experiences in an online environment that leads to age-grade level appropriate science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning, Killham et al. (2014), Wong et al. (2018), PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments. Molnar et al. (2021), Seaman et al. (2018). This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy. Brigid Borrachero Bermejo, Gunning, Duran, Duran (2004). Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents, and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research-based foundation.
