### **Concrete In The Service Of Mankind Appropriate Concrete Technology Vol 3:**

Structural Concrete Textbook - Vol 3, first edition fib Fédération internationale du béton, 1999 The development of reinforced and prestressed concrete during the last 50 years was highly promoted by the Comité Euro international du Béton CEB and the Fédération Internationale de la Précontrainte FIP In 1998 these two associations merged forming the Fédération Internationale du Béton fib The results of CEB and FIP had been distributed in different ways such as CEB Bulletins d'Information FIP Reports FIP Notes and CEB News These Bulletins or reports comprised various kinds of information such as State of the Art Reports Research Reports Application Manuals Guides to Good Practice and the CEB FIP Model Codes 1978 and 1990 These Model Codes provided design principles and application rules to the structural engineering profession and have been predominantly used for code drafting by many national and international standardizing bodies The Textbook on Structural Concrete is now intended to provide background information and justification especially for the CEB FIP Model Code 90 and in some fields of recently extended knowledge It is addressed to advanced students this means that basic information on structural analysis and behaviour of structural concrete is a required prerequisite Practising structural engineers may utilize it for gaining background information on the CEB FIP Model Code 90 and national or regional codes as for ex EUROCODE 2 based on MC 90 The Textbook is also conceived to assist teachers at technical universities or engineering schools to achieve better understanding of the recent theories on structural concrete Having these targets in mind the General Assembly of CEB decided already in 1995 to set up a Special Activity Group Dissemination of Knowledge to realise that work The authors invited to draft the different chapters had been mostly involved already in drafting the Model Code 90 In this way consistent information could be provided both for the code and the textbook Each chapter has been thoroughly discussed and commented within the Special Activity Group 2 This textbook was first presented to fib members during the Technical Activity Workshop in October 1999 in Prague held in connection with the first fib symposium The authors are looking forward to receiving comments from various corners *Exploiting Wastes in Concrete* Ravindra K. Dhir, Trevor G. Jappy, 1999 Concrete will be the key material for mankind to create the built environment of the next millennium The requirements of this infrastructure will be both demanding in terms of technical performance and economy and yet be greatly varied from architectural masterpieces to the simplest of utilities Exploiting wastes in concrete forms the Proceedings of the one day International Seminar held during the Congress Creating with concrete 6-10 September 1999 organised by the concrete technology unit University of Dundee **Structural Engineering, Mechanics and Computation** A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents

the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures
