

Conduction, Convection & Radiation

Heat moves from place to place. We call that heat 'transfer.' There are three ways heat can move, or transfer, from one place to another, which includes **conduction**, **convection** and **radiation**.

Conduction is when heat moves from one object to another object through **direct touch**.

If you touch a hot surface, your hand feels hotter because the heat moves from the surface into your hand. If you put a pot on an electric stove, the hot element touches the pot and transfers heat to the metal where it is touching.

Heat always moves from **hotter** objects to **colder** objects, so the heat moves from the hot element on the stove straight into the bottom of the cooler pot.

Convection is the transfer of heat by the motion of or within a fluid. Convection occurs in atmospheres, oceans, and planetary mantles; however, it also occurs in soup.

The basic idea behind convection is that heated matter becomes **lighter** and "rises"; while **cooler** matter "sinks".
