### **SUMMARY - Consciousness And The Brain: Deciphering How The Brain Codes Our Thoughts By Stanislas Dehaene**

Shortcut Edition, 2021-06-02 Our summary is short simple and pragmatic It allows you to have the essential ideas of a big book in less than 30 minutes By reading this summary you will discover the latest scientific advances especially in the field of neurobiology but especially the latest discoveries concerning the exploration of the brain You will also discover what consciousness is and its origin what consciousness is used for how information reaches consciousness what access to consciousness is that there are tools that allow you to follow the path of information what happens when we become aware of this information that there are signatures of consciousness that an artificial consciousness is possible Man has always had the intuition that the mind is not in the same domain as the body Already the paintings in the caves of Lascaux provide proof of this by representing the body on one side and the mind on the other personified by a bird This is the idea of a human dualism theorized by the philosopher Ren Descartes However scientists tend to refute this idea which they consider to be responsible for a certain delay in scientific research on consciousness In *The Code of Consciousness* the author demonstrates that the advent of brain imaging has made it possible to transform this philosophical concept into a concrete and scientifically viable subject Buy now the summary of this book for the modest price of a cup of coffee

Prinz, 2012-08-17 The problem of consciousness continues to be a subject of great debate in

cognitive science Synthesizing decades of research The Conscious Brain advances a new theory of the psychological and neurophysiological correlates of conscious experience Prinz's account of consciousness makes two main claims first consciousness always arises at a particular stage of perceptual processing the intermediate level and second consciousness depends on attention Attention changes the flow of information allowing perceptual information to access memory systems Neurobiologically this change in flow depends on synchronized neural firing Neural synchrony is also implicated in the unity of consciousness and in the temporal duration of experience Prinz also explores the limits of consciousness We have no direct experience of our thoughts no experience of motor commands and no experience of a conscious self All consciousness is perceptual and it functions to make perceptual information available to systems that allows for flexible behavior Prinz concludes by discussing prevailing philosophical puzzles He provides a neuroscientifically grounded response to the leading argument for dualism and argues that materialists need not choose between functional and neurobiological approaches but can instead combine these into neurofunctional response to the mind body problem The Conscious Brain brings neuroscientific evidence to bear on enduring philosophical questions while also surveying challenging and extending philosophical and scientific theories of consciousness All readers interested in the nature of consciousness will find Prinz's work of great interest

The Conscious Brain Jesse Prinz, 2012-09-27 The Conscious Brain brings neuroscientific evidence to bear on enduring philosophical questions Major philosophical and scientific theories of consciousness are surveyed challenged and extended

**The Crucible of Consciousness** Zoltan Torey, 2009-04-17 An interdisciplinary examination of the evolutionary breakthroughs that rendered the brain accessible to itself In The Crucible of Consciousness Zoltan Torey offers a theory of the mind and its central role in evolution He traces the evolutionary breakthrough that rendered the brain accessible to itself and shows how the mind boosted brain works He identifies what it is that separates the human s self reflective consciousness from mere animal awareness and he maps its neural and linguistic underpinnings And he argues controversially that the neural technicalities of reflective awareness can be neither algorithmic nor spiritual neither a computer nor a ghost in the machine The human mind is unique it is not only the epicenter of our knowledge but also the outer limit of our intellectual reach Not to solve the riddle of the self aware mind writes Torey goes against the evolutionary thrust that created it Torey proposes a model that brings into a single focus all the elements that make up the puzzle how the brain works its functional components and their interactions how language evolved and how syntax evolved out of the semantic substrate by way of neural transactions and why the mind endowed brain deceives itself with entelechy type impressions Torey first traces the language linked emergence of the mind the subsystem of the brain that enables it to be aware of itself He then explores this system how consciousness works why it is not transparent to introspection and what sense it makes in the context of evolution The consciousness revolution and the integrative focus of neuroscience have made it possible to make concrete formerly mysterious ideas about the human mind Torey s model of the mind is the logical outcome of this highlighting a coherent and meaningful role for a reflectively aware humanity
