Based on the authors combined experience of seventy years working on projects around the globe Construction Equipment Management for Engineers Estimators and Owners contains hands on how to information that you can put to immediate use Taking an approach that combines analytical and practical results this is a valuable reference for a wide r **Professional Memoirs, Corps of Engineers, United States Army and Engineer Department at Large** ,2006 *Modern Protective Structures* Theodor Krauthammer, 2008-02-01 In today s world reasonably predictable military operations have been replaced by low intensity conflicts less predictable terrorist activities carried out by determined individuals or small groups that possess a wide range of backgrounds and capabilities Because of the threats posed by this evolving type of warfare civil engineers and emergency personnel face new challenges in designing facilities to protect lives and property and in conducting effective rescue operations and forensic investigations Addressing these needs Modern Protective Structures develops realistic guidelines for the analysis design assessment retrofit and research of protected facilities After introducing a comprehensive risk management approach the author provides a general background on explosive devices and their capabilities as well as explosive effects and the processes that generate them He then discusses the effects of conventional and nuclear explosions The book subsequently considers the significant design differences between conventional and nuclear loads and between existing design procedures and state of the art information from recent research It also summarizes existing blast resistant design approaches and describes the dynamic responses of structural systems to blasts shocks and impacts Additional coverage includes the behavior of specific structural connections the traditional concept of P I diagrams and progressive collapse The book concludes with a systematic and balanced protective design approach Tackling the analytical design assessment and hazard mitigation issues associated with short duration dynamic loads this book examines how impulsive loads affect various types of buildings and facilities It provides the necessary material to help ensure the safety of persons assets and projects **Environmental Impact II** G. Passerini, C.A. Brebbia, 2014-05-14 This book contains papers presented at the 2nd International Conference on Environmental and Economic Impacts on Sustainable Development incorporating Environmental Economics Toxicology and Brownfields Following the success of the first meeting held in the New Forest home of the Wessex Institute of Technology in 2012 it considers the pressing issues related to environmental impacts in order to provide complete solutions The included papers discuss how to assess the impact of economic constraints on the environment considering the social aspects as well as any resulting environmental damage The overuse of natural resources and the resulting pollution of the environment need to be better understood in financial terms Uncontrolled development can result in damage to the environment in terms of the release of toxic substances and hazardous waste The increasing number of new chemical compounds poses a major challenge to the environment as it is difficult in many cases to predict their effects and take appropriate decisions Their economic impact can be particularly challenging The book

examines issues related to whether some forms of development are compatible with environmental protection particularly in cases of possible serious contamination and toxicity The demand for development land has led to the reuse of properties that have been abandoned for a variety of reasons Many of them are brownfields sites which have deteriorated in different ways including by contamination These sites are usually a burden in terms of economic losses and contribute to the detriment of the quality of life of entire neighbourhoods Rehabilitation of local fields particularly those that are contaminated can be an expensive undertaking and require not only technical solutions but the involvement of financial regulatory and community stakeholders Fundamental to this premise is the analysis of the risks involved and the development of appropriate strategies The papers address problems of great importance discussing more constructive and progressive approaches to ensure sustainability A major motivation for the meeting is to learn from past failures to avoid repeating similar mistakes while attempting to prevent emerging threats to the environmental and ecological systems Topics covered include Environmental policies and planning Environmental assessments Development issues Sustainable cities Economic analysis Natural resources management Energy and the environment Food and the environment Ecosystems health Soil contamination Brownfields rehabilitation Water resources management Air and water pollution Toxicity studies Environmental health risk Risk analysis Community participation Legislation and regulations
