Handbook of Research on Advances and Applications in Refrigeration Systems and Technologies Gaspar, Pedro Dinis, da Silva, Pedro Dinho, 2015-08-28 In recent years the sustainability and safety of perishable foods has become a major consumer concern and refrigeration systems play an important role in the processing distribution and storage of such foods To improve the efficiency of food preservation technologies it is necessary to explore new technological and scientific advances both in materials and processes The Handbook of Research on Advances and Applications in Refrigeration Systems and Technologies gathers state of the art research related to thermal performance and energy efficiency Covering a diverse array of subjects from the challenges of surface area frost formation on evaporators to the carbon footprint of refrigerant chemicals this publication provides a broad insight into the optimization of cold supply chains and serves as an essential reference text for undergraduate students practicing engineers researchers educators and policymakers

*Sustainable Retail Refrigeration* Judith A. Evans, Alan M. Foster, 2016-01-19 Carbon emissions from the retail segment of the food cold chain are relatively high compared to other parts of the food cold chain Studies have also shown that food temperature is less well controlled at the retail and consumer end of the cold chain There is therefore considerable potential to optimize performance of refrigerated display cabinets and the refrigeration systems that are used to operate them to reduce carbon emissions and to improve food temperature control Sustainable Retail Refrigeration draws together world experts on retail refrigeration In a single resource the authors cover the latest technologies and best current knowledge in the field With increasing concerns about energy use and global warming gasses retailers are increasingly being called to account for their actions Sustainable Retail Refrigeration is a valuable reference to manufacturers managers and policy makers incorporating both a design and an operational perspective

*Concise Handbook of Fluorocarbon Gases* Sina Ebnesajjad, 2021-04-13 This book describes fluorocarbons gases preparation process properties applications and their evolution over time The impact of fluorocarbons on the ozone layer and global and the development to mitigate those effects have been specially emphasized The first major industrial fluorinated compound was developed in the 1920 s to replace ammonia and sulfur dioxide refrigerants at the General Motors Frigidaire Division by Thomas Midgley Jr and Albert Leon Henne They developed a family of fluorocarbons trademarked Freon for auto air conditioning units revolutionizing the auto industry Other applications were developed over time including fire extinguishers propellants blowing agents cleaners anesthesia artificial blood and others impacting every facet of life In spite of being in broad global use for nearly a century fluorocarbon gases have gone through great evolution during the last few decades In the 1980s it was discovered chlorofluorocarbon CFC gases are harmful to the ozone layer mainly because of their chlorine content Chlorine was released in the upper atmosphere when chlorofluorocarbon molecules were broken down by the high energy cosmic radiation CFCs were progressively banned following the Montreal Protocol of

1987 CFCs were replaced by fluorinated gases containing either less chlorine hydrofluoro chlorocarbons or HCFCs which are much less damaging about 90% less to the ozone layer or with fluorinated gases containing no chlorine i.e. hydrofluorocarbons or HFCs HFC have no impact on the ozone layer but impact global warming detrimentally HFCs are usable without need for changes to the existing refrigeration or air conditioning installations More recently hydrofluoroolefins HFOs which have little or no negative impact on global warming have been developed to replace or reduce the use of HFCs HFOs are used as single compounds or in blends Research and development continues to develop and replace the HCFCs and HFCs completely with environmentally friendly products Concise Handbook of Fluorocarbon Gases presents a reference and text for the commercial fluorocarbon gases which have great many application in a wide range of industries such as refrigeration and air conditioning as well as consumer products Renewable and Alternative Energy: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources,2016-10-19 As the human population expands and natural resources become depleted it becomes necessary to explore other sources for energy consumption and usage Renewable and Alternative Energy Concepts Methodologies Tools and Applications provides a comprehensive overview of emerging perspectives and innovations for alternative energy sources Highlighting relevant concepts on energy efficiency current technologies and ongoing industry trends this is an ideal reference source for academics practitioners professionals and upper level students interested in the latest research on renewable energy

**Refrigeration, Air Conditioning and Heat Pumps** Fabio Polonara,2021-02-11 Refrigeration air conditioning and heat pumps RACHP have an important impact on the final energy uses of many sectors of modern society such as residential commercial industrial transport and automotive Moreover RACHP also have an important environmental impact due to the working fluids that deplete the stratospheric ozone layer which are being phased out according to the Montreal Protocol 1989 Last but not least high global warming potential GWP working fluids directly and energy consumption indirectly are responsible for a non negligible quota of greenhouse gas GHG emissions in the atmosphere thus impacting climate change

*Bulletin de L'Institut International Du Froid* ,2009 **Making a Good Catch** OzonAction Programme,2000 With the commitment of developing and developed countries to phase out CFCs HCFCs and other ozone depleting substances under the Montreal Protocol the fishery industry must identify and adopt new non CFC technologies This publication provides examples of non CFC technologies used in the fishery cold chain in some nine countries It also includes an overview of refrigeration equipment used in the fishery industry an introduction to alternative refrigerants refrigerant data and sources of further information *Technical Literature Abstracts* Society of Automotive Engineers,2000 *Actes du ... Advanced Energy Systems Division, 2000      **CO2 Refrigeration Cycle and Systems** Xin-Rong Zhang, Trygve Magne Eikevik, 2023-05-05 This book covers the fundamentals and applications of carbon dioxide vapor compression refrigeration thermodynamic cycles In particular it presents new application areas such as making ice and snow in the Winter Olympic Games food cooling and refrigeration The book explores the physical and chemical characteristics of CO2 fluid and the unique traits of its thermodynamic cycle The contributors explain how CO2 refrigeration is a developing eco friendly technology and emphasize its importance for refrigeration and air conditioning in the current and future market This book is a valuable source of information for researchers engineers and policy makers looking to expand their applicable knowledge of high potential refrigeration technology using carbon dioxide It is also of interest to postgraduate students and practitioners looking for an academic insight into the industry's latest eco friendly technologies      **Student-staff Directory** University of Illinois at Urbana-Champaign, 2009      **Investigation and Optimisation of Commercial Refrigeration Cycles Using the Natural Refrigerant CO2** Jason Alexander Shilliday, 2012 With tighter regulations on the use of Hydrofluorocarbons HFCs due to their high GWP Global Warming Potential many supermarket operators are looking for alternative refrigerants To contribute to this the objectives of this thesis are to investigate the practicality environmental benefits and economic viability of an all CO2 transcritical refrigeration system suitable for small supermarkets Whilst the environmental benefits of using CO2 as a refrigerant are clear there is rather limited practical and technical knowledge on the design and operation of these systems In this work simulation models of a transcritical booster CO2 refrigeration system have been developed to investigate and evaluate its performance against that of a traditional HFC system The models were verified using test results from an experimental CO2 system built at Brunel University To evaluate the performance of the CO2 refrigeration system in the field energy data from a real supermarket employing a HFC refrigeration system was used for energy simulations The results demonstrate that the annual energy consumption of the CO2 refrigeration system in a small supermarket in Northern Ireland would be equivalent to that of a typical HFC refrigeration system However the low GWP of CO2 will result in a 50% reduction in the combined direct and indirect CO2 emissions over the operational life of the system assuming an annual leakage rate of 15% Northern Ireland has a high number of small supermarkets due to its rural population approximately 615 The CO2 system presented in this research could replace the existing R404A systems in these small supermarkets resulting in emissions reduction of up to 188 752 tCO2e This research has developed selection techniques and criteria to be considered by supermarket designers and operators when developing national strategies for the eventual phase out of HFC refrigerants in all supermarket sizes The validated simulation models developed in this research combined with the detailed geographical and refrigeration load ratio analysis presented will provide valuable information that will assist system designers and operators in the efficient design and optimisation of CO2 technology for small

supermarkets      **Comparative Analysis of Various CO<sub>2</sub> Configurations in Supermarket Refrigeration Systems** ,2014

Our paper presents an analysis of various CO<sub>2</sub> transcritical and cascade secondary loop refrigeration systems that are becoming popular in supermarket applications with the objective of optimizing the operating parameters of these systems In addition the performance of selected CO<sub>2</sub> based refrigeration systems is compared to the baseline R404A multiplex direct expansion system using bin analyses in the eight climate zones of the United States Moreover for the refrigeration systems investigated it was found that the Transcritical Booster System with Bypass Compressor TBS BC had the lowest energy consumption for ambient temperatures  $T_{amb}$  less than 8 °C and for higher ambient temperatures the R404A direct expansion system was found to have the lowest energy consumption Finally the TBS BC performs equivalent to or better than the R404A direct expansion system in the northern two thirds of the US For the southern portion of the US the R404A multiplex DX system performs better than CO<sub>2</sub> systems      Energy Research Abstracts ,1978
