Fast and Scalable Cloud Data Management

Felix Gessert, Wolfram Wingerath, Norbert Ritter, 2020-05-15 The unprecedented scale at which data is both produced and consumed today has generated a large demand for scalable data management solutions facilitating fast access from all over the world As one consequence a plethora of non relational distributed NoSQL database systems have risen in recent years and today's data management system landscape has thus become somewhat hard to overlook As another consequence complex polyglot designs and elaborate schemes for data distribution and delivery have become the norm for building applications that connect users and organizations across the globe but choosing the right combination of systems for a given use case has become increasingly difficult as well To help practitioners stay on top of that challenge this book presents a comprehensive overview and classification of the current system landscape in cloud data management as well as a survey of the state of the art approaches for efficient data distribution and delivery to end user devices The topics covered thus range from NoSQL storage systems and polyglot architectures backend over distributed transactions and Web caching network to data access and rendering performance in the client end user By distinguishing popular data management systems by data model consistency guarantees and other dimensions of interest this book provides an abstract framework for reasoning about the overall design space and the individual positions claimed by each of the systems therein Building on this classification this book further presents an application driven decision guidance tool that breaks the process of choosing a set of viable system candidates for a given application scenario down into a straightforward decision tree

On the Portability of Applications in Platform as a Service Stefan Kolb, 2019-02-21 *VMware Cloud Foundry* Andrew M. Isaacs, Sam Kanakamedala, Lisa Reed, 2012 In April 2011 VMware announced the world's first open Platform as a Service PaaS offering Cloud Foundry The service provided a platform for building deploying and running cloud applications It offered developers a choice of developer frameworks infrastructure services and clouds to which to deploy applications Cloud Foundry was intended to allow software developers to focus on applications development rather than infrastructure Jerry Chen VMware's Vice President of Cloud and Application Services was responsible for identifying the appropriate business model for Cloud Foundry He knew that success for the service would be measured both in terms of establishing a vibrant ecosystem and building a successful business on the platform itself He and his team needed to find the right balance between VMware's own in-house Software as a Service SaaS offerings and potential partners or acquisitions

Cloud Native Go Kevin Hoffman, Dan Nemeth, 2016-12-05 The Complete Guide to Building Cloud-Based Services. Cloud Native Go shows developers how to build massive cloud applications that meet the insatiable demands of today's customers and will dynamically scale to handle virtually any volume of data traffic or users. Kevin Hoffman and Dan Nemeth describe the modern cloud-native application in detail, illuminating factors, disciplines, and habits associated with rapid, reliable cloud-native development. They also introduce Go, a simply elegant, high-performance language that is especially well-suited for cloud development. You'll walk through creating microservices in Go, adding front-end web components using ReactJS and Flux, and mastering advanced Go-based cloud-native techniques. Practices and Paradigms Vaquero, Luis M.,Cáceres, Juan,Hierro, Juan J.,2012-01-31 This book bridges the gap between solutions and users needs pertaining to the most relevant open source cloud technologies available today from a practical perspective **Cloud Computing Service Discovery Framework for IaaS and PaaS Models** Farzad Firozbakht,2016 Cloud service discovery is a new challenge which requires a dedicated framework in order to approach it Over the past few years several methods and frameworks have been developed for cloud service discovery but they are mostly designed for all cloud computing models in general which are not optimal The three cloud computing models are Infrastructure as a Service IaaS Platform as a Service PaaS and Software as a Service SaaS each computing model has its own set of resources Having one single discovery framework for all three is not very efficient and the implementation of such a framework is complex with lots of overhead The existing frameworks for cloud service discovery are mostly semantic based and there are a few syntax based frameworks that are using the filter by Attribute method as their solution This research proposes a cloud service discovery framework focusing on IaaS and PaaS cloud computing models Our framework is using a syntax based query engine at its core and uses Extensible Markup Language XML for storing cloud service information We eventually test the framework from the user point of view with IaaS and PaaS cloud services from real cloud service providers Such a framework could be a good solution for IaaS and PaaS since it is accurate enough for service discovery and easy to update **A**

Platform as a Service for Concurrency-based Applications Provisioning in Internet of Things Deepak Kumar Aggarwal,2018

The Internet of Things IoT is becoming ubiquitous with sensor nodes getting more intelligent and capable of transmitting their processed data to a cloud Concurrency based applications play a vital role in the rise of the IoT A concurrency based application has multiple processes running independently and interacting with each other An example of the concurrency based application in IoT is wildfire management application In a forest various sensor devices are deployed in the different areas The processes of the wildfire management application are running on the sensor devices of different areas independently The process of a particular area monitors the temperature and interacts with the processes in the neighboring areas This interaction is based on the fire contour algorithm which allows the application to provide the real time direction and evolution of the fire in case of the fire incident Cloud computing is a paradigm for swiftly provisioning a shared pool of configurable resources e g services applications network and storage on demand Cloud computing can help to tackle the

challenges of IoT based applications provisioning by offering the Platform as a Service PaaS Therefore developers of such concurrency based applications can use cloud s PaaS for faster development as well as cost efficiency However the PaaS faces several challenges at the time of provisioning of concurrency based application i e development deployment and management For the concurrency based application development phase PaaS should support the various API and frameworks for the development of multiple processes of the concurrency based application which helps to start development quickly For the deployment of the concurrency based application the PaaS must offer the facility of hosting of different processes in an isolated environment and enable process s edges to allow inter process communication In management phase of the concurrency based application PaaS should be able to orchestrate the chain of processes defined during the development phase The main intent of this dissertation is to provide a PaaS solution for concurrency based applications provisioning in IoT to solve the challenges as mentioned above The major contributions of the thesis are in twofold First we propose a PaaS architecture for concurrency based applications provisioning in IoT Second we provide a proof of concept in which a prototype is built using as basis Cloud Foundry an existing PaaS platform and TelosB as the IoT Infrastructure devices The performance measurements have also been made to validate the results claimed [Cloud Foundry Complete Self-Assessment Guide](#) Gerardus Blokdyk,2018 Cloud Foundry Complete Self Assessment Guide
