| False | 17. A pedigree traces the inheritance of a particular trait through only two generations.                               |
| False | 18. In a pedigree, one who does not express the trait is represented by a darkened square or circle.                    |
| True  | 19. In a pedigree, a horizontal line between two symbols shows that these individuals are the parents of the offspring. |

powerful set of tools to the study of how high level behavior can arise in systems governed by simple rules of interaction. Some of the fundamental questions include: What are the principles of evolution, learning and growth that can be understood well enough to simulate as an information process? Can robots be built faster and more cheaply by mimicking biology than by the product design process used for automobiles and airplanes? How can we unify theories from dynamical systems, game theory, evolution, computing, geophysics and cognition? The field has contributed fundamentally to our understanding of life itself through computer models and has led to novel solutions to complex real world problems across high technology and human society. This elite biennial meeting has grown from a small workshop in Santa Fe to a major international conference. This ninth volume of the proceedings of the international A life conference reflects the growing quality and impact of this interdisciplinary scientific community.
