Games of No Chance Richard J. Nowakowski, 1998-11-13 Is Nine Men Morris in the hands of perfect players a win for white or for black or a draw? Can king, rook, and knight always defeat king and two knights in chess? What can Go players learn from economists? What are nimbers, tinies, switches, and minies? This book deals with combinatorial games that is, games not involving chance or hidden information. Their study is at once old and young, though some games such as chess have been analyzed for centuries. The first full analysis of a nontrivial combinatorial game, Nim, only appeared in 1902. The first part of this book will be accessible to anyone regardless of background; it contains introductory expositions, reports of unusual tournaments, and a fascinating article by John H. Conway on the possibly everlasting contest between an angel and a devil. For those who want to delve more deeply, the book also contains combinatorial studies of chess and Go, reports on computer advances such as the solution of Nine Men Morris and Pentominoes, and theoretical approaches to such problems as games with many players. If you have read and enjoyed Martin Gardner or if you like to learn and analyze new games, this book is for you.

Instrumentation and Process Control Janardan Prasad, M. N. Jayaswal, Vishnu Priye, 2009-12 Instrumentation and control system is the heart of all processing industries. No process can run without the aid of instrumentation. Therefore, sometimes it is said that instruments are eyes of process through which a process operator visualizes the process behaviour. Instrumentation and control concepts have undergone a drastic change over the past few years. The book is meant for the graduate-level course of Instrumentation and Process Control. Electrical, Electronics, and Instrumentation Control disciplines. The topics have been divided into 8 chapters. The first three are devoted to Transducers. In these chapters, stress has been given on Transducer Signal Selection, Pneumatic Transmitters, Smart Transmitters, Special Class Thermocouple, Nucleonic Level Gage, Electronic Level Gage, etc. In the chapter on Telemetry, pneumatic transmissions have been added in addition to usual topics. In the chapter Process Control, three element control systems have been described through examples of Boiler Drum Level Control. And lastly, in Recent Developments, Microprocessor Based Instrumentation System, development of PLC and distributed control system, and instrumentation communication protocol have been described in greater detail with

suitable examples The book is a perfect match of instruments that are still in use and which have been recently developed
