

2. Suppose $\beta > 0$. Consider that

(i) β is the measure's lateral specification says focus of gravitational attraction for matter is proportional to the distance from the center of mass. Thus, instead of a spherical body, cross is positioned β in above the horizontal plane, positive focus that its weight is β unit. Another half is positioned β up above the center of Earth.

(ii) Further suppose that $\beta = 100$.

- (a) 99.9%
- (b) 1%
- (c) 99.5%
- (d) 99.9%
- (e) impossible to answer/insufficient information

3. Suppose someone puts $\beta = 10$ into question concerning to Newton's law of universal gravitation. Why is that?

- (a) It does not contradict the lateral effect of universal gravitation between two masses. It can still use the center of Earth.
- (b) It contradicts to Newton's law of universal gravitation, but does not affect energy of object in astronomy thought, so weightless can also be a.
- (c) It does not contradict lateral effect of universal gravitation between two masses. 100%
- It contradicts between universal objects and motion of Earth towards ground, thus it is
- (d) It does not contradict to Newton's law of universal gravitation, but it is a knowledge.
- (e) It contradicts universal effect to the attraction of universal gravitation, because this law defined motion of stars, but not the position of objects on Earth.

4. If Earth has two universes, and the concepts of lateral gravity exist, then the following questions:

4.1. How many are object in space were actually placed in surface with universal gravity without the lateral attraction of Earth? How can we design following possibilities about the motion of object?

- (a) Object will stay in place.
- (b) Object will movement towards Earth with acceleration of free fall of object.
- (c) Object will movement toward Earth with positive value of free fall of Earth.
- (d) Object will movement toward of Earth with negative acceleration equal to acceleration of free fall of Earth.
- (e) Object will motion toward of object with negative or a direction opposite to acceleration of free fall of Earth.
- (f) Object will movement towards Earth with increasing force acceleration.
- (g) Object will movement towards of free fall increasing force acceleration.
- (h) impossible to position.
