Hemoglobin Function in Vertebrates G. di Prisco, B. Giardina, R.E. Weber, 2011-06-28 This volume comprises selected contributions by internationally renowned researchers and represents the state of the art in the field of hemoglobin function in vertebrates living in extreme and temperate environments The topics have been covered from several viewpoints including protein chemistry molecular biology and evolution All the contributions chosen for publication focus on phenotypic and genetic adaptations to changing environmental conditions and on gene expression and regulation The book provides the reader with an update in this field which is presently enjoying a true renaissance following developments in recent years of powerful methodologies such as site directed mutagenesis and discoveries of new roles for example as oxygen sensors and in nitric oxide metabolism **Research Grants Index** National Institutes of Health (U.S.). Human and Animal Ecology Unesco, 1957 *Improvement of Crops in the Era of Climatic Changes* Parvaiz Ahmad, Mohd Rafiq Wani, Mohamed Mahgoub Azooz, Lam-Son Phan Tran, 2014-07-28 Abiotic stress drastically limits agricultural crop productivity worldwide Climate change threatens the sustainable agriculture with its rapid and unpredictable effects making it difficult for agriculturists and farmers to respond to the challenges cropping up from environmental stresses In light of population growth and climate changes investment in agriculture is the only way to avert wide scale food shortages This challenge comes at a time when plant sciences are witnessing remarkable progress in understanding the fundamental processes of plant growth and development Plant researchers have identified genes controlling different aspects of plant growth and development but many challenges still exist in creating an apt infrastructure access to bioinformatics and good crop results *Improvement of Crops in the Era of Climatic Changes Volume 2* focuses on many existing opportunities that can be applied methodically through conventional breeding without touching upon the latest discoveries such as the power of genomics to applied breeding in plant biology Written by a diverse faction of internationally famed scholars this volume adds new horizons in the field of crop improvement genetic engineering and abiotic stress tolerance Comprehensive and lavishly illustrated *Improvement of Crops in the Era of Climatic Changes Volume 2* is a state of the art guide to recent developments vis vis various aspects of plant responses in molecular and biochemical ways to create strong yields and overall crop improvement **Brains, Genes, and the Foundations of Human Society** Jordan Grafman, Chad E. Forbes, The last 20 years have yielded an explosion of information from the still nascent field of social neuroscience Studies devoted to identifying neural correlates of social cognitive and moral judgment processing have established subcortical and cortical regions that are integral for how we filter and interpret information pertinent to family and friends our social in group and strangers and engage in everything from forming immediate impressions of them to judging their behavior with respect to complex moral norms What is less clear is how neural regions involved in implicit and explicit cognitive processing or those cognitive processes that occur almost instantaneously as opposed to those that are more controlled respectively interact to

bias perceptions and behavior Even less is known about how genes and their variants critical for neural function and the structural integrity within neural regions may modulate neural interactions critical for social cognitive and moral judgment processing Recent methodological advancements assessing how different neural regions functionally work together with others and how different genetic variants integral for neural function alter behavior are establishing a more comprehensive view of the implicit and explicit social brain These advancements demonstrate that structures critical for implicit processing e g the amygdala reliably covary in their activity with structures integral for explicit processing e g dorsolateral prefrontal cortex early and often during the processing of social information of varying complexity and in different contexts This suggests that interactions between these regions are necessary to successfully navigate and immediately adapt to one's environment In turn genetic variants like those that comprise the brain derived neurotrophic factor BDNF gene oxytocin receptor gene or serotonin transporter gene likely play an important role in modulating the interaction between and within neural regions integral for interpersonal trust intergroup processes person perception theory of mind i e inferring the thoughts and feelings of others and moral judgment processing The purpose of this Research Topic is to further our understanding of how subcortical and cortical neural regions that vary in their functional contributions to social behavior also depend upon genetic influences in shaping individuals' perceptions beliefs attitudes behaviors and how information is attended to and encoded to influence future social behaviors It is particularly important to demonstrate how these regions reliably interact as a function of processing speed i e implicit or explicit and or context to predict behavior or performance Demonstrating how different genetic factors in turn moderate this interaction or how genetic factors alter a specific region's interaction with other regions is equally important We therefore solicit original empirical work review and opinion papers and methodological papers that can promote our understanding of how interactions between neural regions underlying implicit and explicit processes influence social cognitive and moral judgment processing and are in turn modulated by genetic predispositions This includes work that utilizes fMRI EEG and psychophysiological methodologies lesion samples as well as developmental and computational approaches This Research Topic could serve as an important step in the evolution of our understanding of the complexity of the social mind as well as illuminate the robust effects context has on the way the brain interacts with different stimuli at every level of cognitive processing
