Source: Androulaki, Elli, et al. "Hyperledger fabric: a distributed operating system for permissioned blockchains." Proceedings of the thirteenth EuroSys conference. 2018.

Limitations of earlier Permissioned Blockchains

- Consensus, often hard-coded within the platform, contradicts the well-established understanding that there is no "one-size-fits-all" (BFT) consensus protocol
- The **trust model** of transaction validation is determined by the **consensus protocol** and **cannot be adapted** to the requirements of the **smart contract**

An enterprise blockchain or distributed ledger technology DLT is very much like a shared document stored on a cloud drive There are just two differences First there is no master copy of this document stored with an escrow or arbiter and second any change to the document happens only after it has been signed off by all required stakeholders This allows businesses to form a peer to peer network and establish a common ground of truth without giving up its control in hands of a single organization The decentralized nature of the ledger combined with version control or immutability of the stored data is perfect for fast account reconciliation secure tracking and tracing of products and transparent records with no costly third party auditing This book teaches you how to build such decentralized applications
