Face Recognition Technologies Douglas Yeung, Rebecca Balebako, Carlos Ignacio Gutierrez Gaviria, Michael Chaykowsky, 2020-05-15 Face recognition technologies FRTs have many practical security related purposes but advocacy groups and individuals have expressed apprehensions about their use This report highlights the high level privacy and bias implications of FRT systems The authors propose a heuristic with two dimensions consent status and comparison type to help determine a proposed FRT s level of privacy and accuracy They also identify privacy and bias concerns

Face Recognition in Attendance Management Systems Shobhakumar S, Vijay Krishnaa S, 2020 Face recognition is one of the important measures to scale image analysis and computer vision The basic methods of recognizing a person has outdated and face recognition is one of the most effective ways to recognize a person Security cameras are located in public places like airports Offices University ATM Bank and in any locations with a security system The basic functionality face recognition is to detect and recognize the biometric of a person I e iris The main functionality is used for security systems and companies The process involves extraction of its features and then recognizing the iris regardless of external factors and transformations translate rotate and scale image This project specifically signifies the use of face recognition for the purpose of monitoring the employees and students of different schools and workplaces

Handbook of Remote Biometrics Massimo Tistarelli, Stan Z. Li, Rama Chellappa, 2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements One of the main limitations of the precursors of today s biometrics which is still present in the vast majority of the existing biometric systems has been the need to keep the device in close contact with the subject to capture the biometric measurements This clearly limits the applicability and convenience of biometric systems This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics IAPR TC4 The last four chapters of the book are derived from some of the best presentations by the participating students of the school The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics

Gates, 2011-01-23. Since the 1960s, a significant effort has been underway to program computers to see the human face to develop automated systems for identifying faces and distinguishing them from one another, commonly known as Facial Recognition Technology. While computer scientists are developing FRT in order to design more intelligent and interactive machines, businesses and state agencies view the technology as uniquely suited for smart surveillance systems that automate the labor of monitoring in order to increase their efficacy and spread their reach. Tracking this technological pursuit, *Our Biometric Future* identifies FRT as a prime example of the failed technocratic approach to governance where new technologies are pursued as shortsighted solutions to complex social problems. Culling news stories, press releases, policy statements, PR kits, and other materials, Kelly Gates provides evidence that instead of providing more security for more people, the pursuit of FRT is being driven by the priorities of corporations, law enforcement, and state security agencies, all convinced of the technology's necessity and unhindered by its complicated and potentially destructive social consequences. By focusing on the politics of developing and deploying these technologies, *Our Biometric Future* argues not for the inevitability of a particular technological future but for its profound contingency and contestability.
