

BSWE-002: Social Work Intervention with Individuals and Groups December, 2017

Note: (i) Attempt all the five questions.
(ii) All questions carry equal marks.
(iii) Answer to question 1 and 2 in about 500 words each.

Q1. Define casework. Explain the categories of intervention. Give illustrations from your fieldwork setting.

Ans. In social work, a caseworker is a social worker who is employed by a government agency, non-profit organization, or another group to take on the cases of individuals and provide them with advocacy, information and solutions. They are required by law to have a license in almost all states.

Social Casework: Social casework can be effectively used in situations of individual problems, such as alcoholism, depression, drug abuse, anxiety, marital and family difficulties, etc. Further in induction, grievance situations, transfer cases, leave needs, absentee situations, problems due to job loss, retirement, etc., it can find much use. In accident cases, cases of indiscipline, it is also very useful.

Intervention: Technical definitions of "intervene" as given in Webster's Dictionary include "to come in or between by way of modification" and "to come between in action". Intervention knowledge would include that knowledge which helps caseworkers bring about change in those situations with which they are concerned. This knowledge focuses on the questions, what can be done to modify this situation, and will it be effective? Intervention begins with the set of goals as decided together by the client and the worker. Goals, as mentioned earlier are determined by the client's needs and the availability of external resources if the services within the agency are not available. The ultimate objective of the worker is to reduce the client's distress and decrease the malfunctioning in the client's situation or to put it positively as Hollis says it is to enhance the client's comfort, satisfaction and self-realization. Here we must look at client motivation and client strengths and at how the situation can be modified or changed.

Categories of Intervention: Intervention can be of three types: a) Direct, b) Environmental modification, and (c) Administration of a practical service.

- By direct methods of intervention is meant a series of interviews carried out with a purpose of helping the client make constructive decisions, maintain an emotional balance and reinforce attitudes favourable to growth and change. They are called direct as they involve face-to-face interaction. These include counselling, supportive techniques like acceptance, assurance, and facilitation of expression of feelings, accrediting and building of self-confidence, and being with the client. Counselling techniques are inclusive of the supportive techniques as in the beginning phase of the client worker communication, use of supportive techniques is necessary for a professional relationship. However, as Grace Mathew says they need to be considered as two sets of techniques as supportive techniques are not always followed by counselling techniques even though counselling techniques are always preceded by one or more supportive techniques. Counselling is intended to help a person in a rational way to sort out the issues in his/her situation, to clarify his/her problems and conflicts, to discuss the various options and help make choices. Counselling, to some extent is an educational process and is used only for individual counselling that calls for professional training, education and experience. Some of the important counselling techniques are reflective discussion, giving advice, motivation, clarification, correcting perception, modelling, anticipatory guidance, role playing, reality orientation, partialisation, interpretation, universalisation and confrontation. (For more details of these counselling techniques read the book, "An Introduction to Social Casework" by Grace Mathew.) Supportive techniques: Acceptance, which is a basic technique of helping, is conveyed through words and the overall behaviour is visible to the client. Further, it is characterized by the way the worker demonstrates warmth and genuineness to the client. The way the client is received and listened to, is important in creating a feeling of being accepted. One way to accept the client is to empathize rather than sympathize. Sympathy is the feeling of concern, compassion or sorrow, while empathy refers to the ability of entering into another person's 'shoes' or mental state and to feel the latter's feelings. Worker has to guard himself or herself from sympathizing with a client.
- According to Hamilton environmental modification refers to all attempts to correct or improve the situation in order to reduce strain and pressure. The emphasis here is on modifying the situation. This method is often referred to as an indirect method of intervention as the focus is on the
