A Textbook of Automobile Engineering Gupta S.K., For the Students of B E B Tech of All Technical Universities A Textbook of Automobile Engineering is intended for the use of students of B E B Tech of all Indian and Foreign Universities The subject matter is presented in the most concise to the point and lucid manner *Introduction to Automotive Engineering* R. Sakthivel, Faisal O. Mahroogi, S. Narayan, S. Abudbaker, M. U. Kaisan, Youssef Alammari, 2019-03-07 The automotive industry is one of the largest and most important industries in the world Cars buses and other engine based vehicles abound in every country on the planet and it is continually evolving with electric cars hybrids self driving vehicles and so on Technologies that were once thought to be decades away are now on our roads right now Engineers technicians and managers are constantly needed in the industry and often they come from other areas of engineering such as electrical engineering process engineering or chemical engineering Introductory books like this one are very useful for engineers who are new to the industry and need a tutorial Also valuable as a textbook for students this introductory volume not only covers the basics of automotive engineering but also the latest trends such as self driving vehicles hybrids and electric cars Not only useful as an introduction to the science or a textbook it can also serve as a valuable reference for technicians and engineers alike The volume also goes into other subjects such as maintenance and performance Data has always been used in every company irrespective of its domain to improve the operational efficiency and performance of engines This work deals with details of various automotive systems with focus on designing various components of these system to suit the working conditions on roads Whether a textbook for the student an introduction to the industry for the newly hired engineer or a reference for the technician or veteran engineer this volume is the perfect introduction to the science of automotive engineering The Motor Car Giancarlo Genta, Lorenzo Morello, Francesco Cavallino, Luigi Filtri, 2014-01-06 This book is an introduction to automotive engineering to give freshmen ideas about this technology The text is subdivided in parts that cover all facets of the automobile including legal and economic aspects related to industry and products product configuration and fabrication processes historic evolution and future developments The first part describes how motor vehicles were invented and evolved into the present product in more than 100 years of development The purpose is not only to supply an historical perspective but also to introduce and discuss the many solutions that were applied and could be applied again to solve the same basic problems of vehicle engineering This part also briefly describes the evolution of automotive technologies and market including production and development processes The second part deals with the description and function analysis of all car subsystems such as vehicle body chassis including wheels suspensions brakes and

steering mechanisms diesel and gasoline engines electric motors batteries fuel cells hybrid propulsion systems driveline including manual and automatic gearboxes This part addresses also many non technical issues that influence vehicle design and production such as social and economic impact of vehicles market regulations particularly on pollution and safety In spite of the difficulty in forecasting the paths that will be taken by automotive technology the third part tries to open a window on the future It is not meant to make predictions that are likely to be wrong but to discuss the trends of automotive research and innovation and to see the possible paths that may be taken to solve the many problems that are at present open or we can expect for the future The book is completed by two appendices about the contribution of computers in designing cars particularly the car body and outlining fundamentals of vehicle mechanics including aerodynamics longitudinal acceleration and braking and transversal path control motion
