Manipulation Naomi Balaban, 2007-11-28 In the well watered groves of academe most of us are content to gather worshipful students and technicians in a shady nook to contemplate the eternal verities and to plan extravagant feasts to celebrate our contributions to knowledge and to the gradual improvement of the human condition As one convocation follows another and as our funding agencies pump billions of dollars into incremental research that fills every possible pigeon hole in which a gene makes a protein a small number of intellectual athletes seize a pivotal concept and plunge into the real world It is this small band of nimble and impossibly brave intellectual halfbacks who win games in the real world and this book is the result of the drive and intellectual athleticism of its editor and several of her contributors Bacteria affect humans more than any other life forms with which we share the blue planet but our understanding of these invisible companions has developed in a staggering pattern crippled by our panic and consequent shifts of emphasis When our race was threatened by epidemic diseases we visualized bacteria as swarms of potentially lethal planktonic cells from which we must remain isolated by sanitation and which we had to kill by immunization and chemical antibacterial compounds By the time this overriding threat had been

obviated we began to examine natural and pathogenic ecosystems by direct methods and we were surprised to find that planktonic bacteria are comparatively rare and that most prokaryotes grow in matrix enclosed biofilms
