Decision Theory And Choices A Complexity Approach New Economic Windows:

Decision Theory and Choices: a Complexity Approach Marisa Faggini, Concetto Paolo Vinci, 2010-12-28 In economics agents are assumed to choose on the basis of rational calculations aimed at the maximization of their pleasure or profit. Formally agents are said to manifest transitive and consistent preferences in attempting to maximize their utility in the presence of several constraints. They operate according to the choice imperative: given a set of alternatives, choose the best. This imperative works well in a static and simplistic framework but it may fail or vary when the best is changing continuously. This approach has been questioned by a descriptive approach that springing from the complexity theory tries to give a scientific basis to the way in which individuals really choose, showing that those models of human nature are routinely falsified by experiments since people are neither selfish nor rational. Thus inductive rules of thumb are usually implemented in order to make decisions in the presence of incomplete and heterogeneous information sets. *Econophysics of Order-driven Markets* Frédéric Abergel, Bikas K Chakrabarti, Anirban Chakraborti, Manipushpak Mitra, 2011-04-06 The primary goal of the book is to present the ideas and research findings of active researchers from various communities: physicists, economists, mathematicians, financial engineers working in the field of Econophysics who have undertaken the task of modelling and analyzing order-driven markets. Of primary interest in these studies are the mechanisms leading to the statistical regularities, stylized facts of price statistics. Results pertaining to other important issues such as market impact, the profitability of trading strategies or mathematical models for microstructure effects are also presented. Several leading researchers in these fields report on their recent work and also review the contemporary literature. Some historical perspectives, comments and debates on recent issues in Econophysics research are also included. **Quantum Decision Theory and Complexity Modelling in Economics and Public Policy** Anirban Chakraborti, Emmanuel Haven, Sudip Patra, Naresh Singh, 2023-09-21 This book is an outcome of the interdisciplinary conference held at OP Jindal Global University. Quantum Decision making and Complexity modeling and their possible applications in social sciences, economics, finance and public policy. The volume builds upon the emerging fields of Econophysics, Complexity theory and Quantum-like modelling in cognition and social sciences and their plausible applications in economics and public policy. There can be deep linkages between the micro, meso and macro scales at which these paradigms operate. In this data-driven age, greater amounts of information along with the facility to harvest, sort and process said information have permitted an expansion of the capability to study a society's various factors to a degree of detail and inclusiveness that has never before been available to researchers. As a result, an increasing number of throughlines is being discovered, revealing heretofore unknown connections between various disciplines and enhancing the study of such societal tropes as finance, language, shared behavior and many others. As the reader will see with clearer understanding of the interconnectedness of society's assorted parts, comes a clearer understanding of the society as a whole. We have received critical thoughts from noted experts in social and natural sciences to explore possible interconnections. The

editors of this book earnestly hope that the critical reviews presented in this volume will stimulate further scholarly interest but also interest among policy practitioners for the purpose of exploring possibilities for creating a new paradigm for comprehending pressing issues of deep uncertainty and emergence in social dynamics **Managing Organizations**
