

② (i) $y^3 = x^2(2a - y)$

→ ① Equation of curve contains only even powers of x

∴ Symmetry about y -axis.

② No absolute constant curve passes through origin

③ Tangent at origin.

$$y^3 - 2ax^2 + x^2y = 0$$

$$-2ax^2 = 0$$

$$x^2 = 0$$

∴ $x = 0$

Curve Tracing In Engineering Mathematics:

Engineering Mathematics Babu Ram, 2009 Engineering Mathematics covers the four mathematics papers that are offered to undergraduate students of engineering With an emphasis on problem solving techniques and engineering applications as well as detailed explanations of the mathematical concepts this book will give the students a complete grasp of the mathematical skills that are needed by engineers *Engineering Mathematics* S.R. Koneru, 2002-11 This book incorporates in one volume the material covered in the mathematics course of undergraduate programmes in engineering and technology The topics discussed include sequences and series mean value theorems evolutes functions of several variables solutions of ordinary and partial differential equations Laplace Fourier and Z transform with their applications

of the subject thus restricted complete in all essential points without exceeding such limits as its importance would seem to justify This it has seemed to me possible to do by introducing at an early stage the device of the Analytical Triangle and using it in connection with all the methods of approximation In constructing the triangle which is essentially Newton s parallelogram I have adopted Cramer s method of representing the possible terms by points with a distinguishing mark to indicate the actual presence of the term in the equation These points were regarded by Cramer as marking the centres of the squares in which in Newton s parallelogram the values of the terms were to be inscribed but I have followed the usual practice first suggested I believe by Frost of regarding them merely as points referred to the sides of the triangle as coordinate axes It has however been thought best to return to Newton s arrangement in which these analytical axes are in the usual position of coordinate axes instead of placing the third side of the triangle like De Gua and Cramer in a horizontal position
