**Causality, Correlation And Artificial Intelligence For Rational Decision Making** Tshilidzi Marwala, 2015-01-02

Causality has been a subject of study for a long time. Often causality is confused with correlation. Human intuition has evolved such that it has learned to identify causality through correlation. In this book, four main themes are considered and these are causality, correlation, artificial intelligence, and decision making. A correlation machine is defined and built using multi-layer perceptron network, principal component analysis, Gaussian Mixture models, genetic algorithms, expectation maximization technique, simulated annealing, and particle swarm optimization. Furthermore, a causal machine is defined and built using multi-layer perceptron, radial basis function, Bayesian statistics, and Hybrid Monte Carlo methods. Both these machines are used to build a Granger non-linear causality model. In addition, the Neyman-Rubin, Pearl, and Granger causal models are studied and are unified. The automatic relevance determination is also applied to extend the Granger causality framework to the non-linear domain. The concept of rational decision making is studied, and the theory of flexibly bounded rationality is used to extend the theory of bounded rationality within the principle of the indivisibility of rationality. The theory of the marginalization of irrationality for decision making is also introduced to deal with satisficing within irrational conditions. The methods proposed are applied in biomedical engineering, condition monitoring, and for modelling interstate conflict.

**Handbook on Data Management in Information Systems** Jacek Blazewicz, Wiesław Kubiak, Tadeusz Morzy, Marek Rusinkiewicz, 2012-12-06. This book is the sixth of a running series of volumes dedicated to selected topics of information theory and practice. The objective of the series is to provide a reference source for problem solvers in business industry, government, and professional researchers and graduate students. The first volume, *Handbook on Architecture of Information Systems*, presents a balanced number of contributions from academia and practitioners. The structure of the material follows a differentiation between modeling languages, tools, and methodologies. The second volume, *Handbook on Electronic Commerce*, examines electronic commerce storefront, online business, consumer interface, business-to-business networking, digital payment, legal issues, information product development, and electronic business models. The third volume, *Handbook on Parallel and Distributed Processing*, presents basic concepts, methods, and recent developments in the field of parallel and distributed processing, as well as some important applications of parallel and distributed computing. In particular, the book examines such fundamental issues in the above area as languages for parallel processing, parallel operating systems, architecture of parallel and distributed systems, parallel database and multimedia systems, networking aspects of parallel and distributed systems, efficiency of parallel algorithms. The fourth volume, *Information Technologies for Education and Training*, is devoted to a presentation of current and future research and applications in the field of educational technology. The fifth double volume on *Knowledge Management* contains an extensive fundamental coverage of the knowledge.
