An Introduction to Optimization with Applications in Machine Learning and Data Analytics Jeffrey Paul Wheeler, 2023-12-07 The primary goal of this text is a practical one Equipping students with enough knowledge and creating an independent research platform the author strives to prepare students for professional careers Providing students with a marketable skill set requires topics from many areas of optimization The initial goal of this text is to develop a marketable skill set for mathematics majors as well as for students of engineering computer science economics statistics and business Optimization reaches into many different fields This text provides a balance where one is needed Mathematics optimization books are often too heavy on theory without enough applications texts aimed at business students are often strong on applications but weak on math The book represents an attempt at overcoming this imbalance for all students taking such a course The book contains many practical applications but also explains the mathematics behind the techniques including stating definitions and proving theorems Optimization techniques are at the heart of the first spam filters are used in self driving cars play a great role in machine learning and can be used in such places as determining a batting order in a Major League Baseball game Additionally optimization has seemingly limitless other applications in business and industry In short knowledge of this subject offers an individual both a very marketable skill set for a wealth of jobs as well as useful tools for research in many academic disciplines Many of the problems rely on using a computer Microsoft s Excel is most often used as this is common in business but Python and other languages are considered The consideration of other programming languages permits experienced mathematics and engineering students to use MATLAB or Mathematica and the computer science students to write their own programs in Java or Python Linear Algebra David Poole, 2005 David Poole s innovative book emphasizes vectors and geometric intuition from the start and better prepares students to make the transition from the computational aspects of the course to the theoretical Poole covers vectors and vector geometry first to enable students to visualize the mathematics while they are doing matrix operations With a concrete understanding of vector geometry students are able to visualize and understand the meaning of the calculations that they will encounter By seeing the mathematics and understanding the underlying geometry students develop mathematical maturity and can think abstractly when they reach vector spaces Throughout the text Poole s direct conversational writing style connects with students and an abundant selection of applications from a broad range of disciplines clearly demonstrates the relevance of linear algebra

Explorations of Mathematical Models in Biology with MATLAB Mazen Shahin, 2013-12-24 Explore and analyze the solutions of mathematical models from diverse disciplines As biology increasingly depends on data algorithms and models it has become necessary to use a computing language such as the user friendly MATLAB to focus more on building and analyzing models as opposed to configuring tedious calculations Explorations of Mathematical Models in Biology with MATLAB provides an introduction to model creation using MATLAB followed by the translation analysis interpretation and

observation of the models With an integrated and interdisciplinary approach that embeds mathematical modeling into biological applications the book illustrates numerous applications of mathematical techniques within biology ecology and environmental sciences Featuring a quantitative computational and mathematical approach the book includes Examples of real world applications such as population dynamics genetics drug administration interacting species and the spread of contagious diseases to showcase the relevancy and wide applicability of abstract mathematical techniques Discussion of various mathematical concepts such as Markov chains matrix algebra eigenvalues eigenvectors first order linear difference equations and nonlinear first order difference equations Coverage of difference equations to model a wide range of real life discrete time situations in diverse areas as well as discussions on matrices to model linear problems Solutions to selected exercises and additional MATLAB codes Explorations of Mathematical Models in Biology with MATLAB is an ideal textbook for upper undergraduate courses in mathematical models in biology theoretical ecology bioeconomics forensic science applied mathematics and environmental science The book is also an excellent reference for biologists ecologists mathematicians biomathematicians and environmental and resource economists
