researcher and technologist Matt Beane reveals the hidden code that underwrites every successful expert novice relationship. Beane has spent the last decade examining this unique bond in a variety of settings from warehouses to surgical suites. He has found that just as the four amino acids are the building blocks of DNA, the three C's—challenge, complexity, and connection—are the basic components of how we develop our most valuable skills. Whether you're an expert or a novice, this book will show you how to build skill more effectively and how to make intelligent technologies part of the solution, not the problem. *The Skill Code* is an insightful must-read with significant implications for how we will work and build skill in the twenty-first century—a guide to help you not only survive but thrive. Campbell, 1993 This volume contains the papers updated in some cases presented at the first AISMC Artificial Intelligence and Symbolic Mathematical Computations conference held in Karlsruhe August 3-6, 1992. This was the first conference to be devoted to such a topic after a long period when SMC made no appearance in AI conferences though it used to be welcome in the early days of AI. Some conferences were held recently on mathematics and AI but none was directly comparable in scope to this conference. Because of the novelty of the domain, authors were given longer allocations of time than usual in which to present their work. As a result, extended and fruitful discussions followed each paper. The introductory chapter in this book, which was not presented during the conference, reflects in many ways the flavor of these discussions and aims to set out the framework for future activities in this domain of research. In addition to the introduction, the volume contains 20 papers.
