of hybrid work and AI one thing is clear the war for talent is over and talent won With sparsely populated offices and people working from wherever they are and with AI emerging everywhere in business and dominating headlines our work lives have undergone a remarkable transformation seemingly overnight But the reality is that for years the ever growing digital wave has been breaking down organizational boundaries and increasing the adoption of open innovation including the use of crowdsourcing platforms as a talent solution Now the imperative is clear adapt to and leverage this new digitally enabled world of open talent or get left behind In this eye opening essential guidebook John Winsor and Jin Paik with their work at the Laboratory for Innovation Science at Harvard show how the massive reset of the pandemic allowed talented workers everywhere to exit their jobs without leaving the workforce Now many are freelancing for multiple companies or are starting small businesses challenging hiring managers as never before amidst a transformed workforce What's more talent has more power than ever using platforms such as Freelancer com Fiverr and Upwork setting their own terms for work what where when and at what price How can companies adapt The key the authors argue is shifting to a more distributed idea and structure of collaborative work The authors call this a networked organization where talent is culled from both inside and outside the organization and viewed through a single lens as a global ecosystem that can be tapped as needed With rich stories keen insights and an abundance of practical advice Winsor and Paik provide a new framework and operating model for transforming your organization into a talent orchestrating problem solving machine **PC Mag**, 2004-12-28 PCMag com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology

Drawing multimodality's bigger picture: Metalanguages and corpora for multimodal analyses

Janina Wildfeuer, Claudia Lehmann, 2024-07-30 Multimodality has most recently been described no longer as a research field

or discipline on its own but rather as a stage of development within a field Bateman 2022a 49 The realization that 1 many

different fields and disciplines now enter their own multimodal phase with new interest in multimodal phenomena and that 2

these disciplines all commit to the development of multimodality research with their own theoretical principles and

methodological tools brings with it not only an immense breadth of potential analytical objects but also many new meta

methodological issues We need to find ways of combining insights from the variously imported theoretical and

methodological backgrounds brought along by previous non multimodal stages of any contributing disciplines Bateman

2022a 49 At the same time the search for a meta methodology for multimodal analyses is pushed further by the recent trend

towards more empirical approaches to multimodal phenomena and the development and use of larger multimodal corpora

that just as well require theoretical and methodological refinements We need to develop ways of strengthening claims with

robustly applicable methods which nevertheless remain firmly anchored theoretically Bateman 2022b 64 For a productive

handling of these issues disciplinary triangulation and finding a common language or metalanguage Maton newest results

from data collection methods and multimodal corpus analyses that expand the current quantitative work by e g applying

existing theories and methods to larger datasets or exploring the newest communication technologies We are particularly

interested in seeing how works addressing these aspects contribute to finding ways of productive triangulation and

integration for and within a meta methodology for multimodality research This Research Topic aims to bring together

scholars from a variety of disciplines interested in multimodality research to review explore and advance the contributions

that John Bateman as one of the key figures in multimodality research has made to both theory and method building as well

as to the driving forward of multimodal empirical and corpus analyses We welcome contributions that for example critically

address the theoretical and methodological advancements that John Bateman has made with regard to the notions of semiotic

mode discourse semantics genre textuality etc apply one of the many approaches that John Bateman has developed for the

empirical analysis of multimodal artefacts e g the GeM model for page based documents his work on multimodal film and

audio visual analysis and the discourse semantics and or annotation approach to visual narratives to larger corpora or

currently newly developing communicative situations expand on one of the abovementioned aspects with new ideas and

insights from disciplines that have not yet been included in multimodality research Optimal Physical Activity across the

conditions of Earth and many biological and physiologic systems depend on mechanical loading to maintain integrity during growth and maturation during skeletal maturity and during the aging process These systems subscribe to the use it or lose it principle and thus require continual use to maintain integrity Given that premise considerable basic and clinical research efforts have been directed at optimizing the effectiveness and positive impact of exercise on sports performance and the well being of those with intact systems However those with disabilities or compromised abilities also benefit from exercise protocols and there exists a need to focus attention on these populations as well Given the myriad of biological and physiological systems that benefit from exercise and mechanical loading there is a need for all humans of varying abilities to not only maintain the integrity of their health but to attempt to optimize it recognizing that optimizing each person s health across the stages of the life cycle may require different exercise protocols dependent on stage of life sex genetics and other individualized variables For those with physical disabilities embracing and maintaining such exercise protocols may be challenging but expanded research translation of findings and integration of the outcomes into everyday life to enhance the health and well being of this significant population are needed going forward
