Artificial Intelligence with Common Lisp James L. Noyes, 1992 The book provides a balanced survey of the fundamentals of artificial intelligence, emphasizing the relationship between symbolic and numeric processing. The text is structured around an innovative, interactive combination of LISP programming and AI; it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented. After an overview of the field of artificial intelligence, the text presents the fundamentals of LISP, explaining the language's features in more detail than any other AI text. Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code. Back cover: This text is intended to provide an introduction to both AI and LISP for those having a background in computer science and mathematics.
