web jun 20 2019 1 description of translation genes contain the instructions a cell needs to make proteins making proteins from dna requires a 2 step process transcription the process of copying the gene s dna into rna translation the process of using rna to synthesize protein taken together these two steps make up the central dogma of

protein synthesis higher bbc - Jun 08 2022

web in transcription the dna code is read and in translation the code is used to build up protein molecules dna is a triplet code each triplet a group of three bases codes for a specific amino acid

translation gene expression higher human biology revision - Jan 15 2023

web discover gene expression where protein is synthesised and dna sequences are transcribed and translated this involves messenger transfer and ribosomal rna

transcription and translation cell biology genetics and - Jul 09 2022

web about this chapter the flow of genetic information in cells from dna to mrna to protein is described by the central dogma which states that genes specify the sequence of mrnas which in turn specify the sequence of amino acids making up all proteins the decoding of one molecule to another is performed by specific proteins and rnas
