Hatzopoulos, 2024-05-01 This book is for students and professionals involved in Geospatial Computations and related areas such as Geomatics Surveying Engineering Geoinformatics Geospatial Information Science and Technology GIS T Geography Geology Agriculture and Geointelligence More emphasis is given to using scientific methods and tools materialized in algorithms and software to produce practical results Specifically algorithms such as error analysis of measurements and the least squares adjustment method to obtain ground coordinates of points with their reliability to construct the geometric framework of the geographical space necessary for various geospatial applications such as a Geographic Information System GIS are discussed Other algorithms involve interpolation methods for DEM and spatial data analysis Furthermore such algorithms in the geospatial area are basic surveying methods using a total station photogrammetry digital terrain modeling GNSS augmented reality coordinate transformations map projections and interpolation Most algorithms are implemented into 27 educational computer programs and necessary data to understand GIS T operations from the inside with a didactics approach targeting to become more intelligent than machines The educational programs include general photogrammetric operations with aerial photography and drones 3 D surveying network adjustment GNSS navigation solutions and many others This approach helps to obtain high quality scientific and technological bases which in turn enhance the ability to exploit and use most tools and functions of existing GIS T systems and therefore to be highly competitive as a professional in the market This book has ten chapters such as Measurements and Errors Estimation and Accuracy Standards Specialized Numerical Methods Error Propagation Least Squares Adjustment Condition Method and Generalized Least Squares Applications to Map Projections and Transformation of Coordinates Applications to Surveying Networks Applications of Computational Methods in Photogrammetry Digital Elevation Models DEM Computer Programming Scripting AI

Stochastic Models for Geodesy and Geoinformation Science Frank Neitzel, 2021-02-12 In geodesy and geoinformation science as well as in many other technical disciplines it is often not possible to directly determine the desired target quantities Therefore the unknown parameters must be linked with the measured values by a mathematical model which consists of the functional and the stochastic models The functional model describes the geometrical physical relationship between the measurements and the unknown parameters This relationship is sufficiently well known for most applications With regard to the stochastic model two problem domains of fundamental

importance arise 1 How can stochastic models be set up as realistically as possible for the various geodetic observation methods and sensor systems 2 How can the stochastic information be adequately considered in appropriate least squares adjustment models Further questions include the interpretation of the stochastic properties of the computed target values with regard to precision and reliability and the use of the results for the detection of outliers in the input data measurements In this Special Issue current research results on these general questions are presented in ten peer reviewed articles The basic findings can be applied to all technical scientific fields where measurements are used for the determination of parameters to describe geometric or physical phenomena

Surveying for Civil and Mine Engineers John Walker, Joseph Awange, 2020-06-06 This updated and expanded edition of the book includes four additional chapters on earthwork on sloping sites transitional curves and super elevation calculations of super elevations on composite curves and underground mine surveying Richly illustrated with diagrams equations and tables as well as examples of every day survey tasks It also covers new topics such as the global navigation satellite system s Real Time Kinematic RTK which are increasingly used in a wide range of everyday engineering applications
