Wang, 2007-02-14 Plated structures are widely used in many engineering constructions ranging from aircraft to ships and

from off shore structures to bridges and buildings Given their diverse use in severe dynamic loading environments it is vital that their dynamic behaviour is analysed and understood Analysis and design of plated structures Volume 2 Dynamics provides a concise review of the most recent research in the area and how it can be applied in the field The book discusses the modelling of plates for effects such as transverse shear deformation and rotary inertia assembly of plates in forming thin walled members and changing material properties in composite laminated and functionally graded plates Various recent techniques for linear and nonlinear vibration analysis are also presented and discussed The book concludes with a hybrid strategy suitable for parameter identification of plated structures and hydroelastic analysis of floating plated structures With its distinguished editors and team of international contributors Analysis and design of plated structures Volume 2 Dynamics is an invaluable reference source for engineers researchers and academics involved in the analysis and design of plated structures It also provides a companion volume to Analysis and design of plated structures Volume 1 Stability

Advances in Mechanical Problems of Functionally Graded Materials and Structures Indra Vir Singh,Tiantang Yu,Le Van Lich,Tinh Quoc Bui,2019-10-28 The book deals with novel aspects and perspectives in functionally graded materials FGMs which are advanced engineering materials designed for a specific performance or function with spatial gradation in structure and or composition The contributions mainly focus on numerical simulations of mechanical properties and the behavior of FGMs and FGM structures Several advancements in numerical simulations that are particularly useful for investigations on FGMs have been proposed and demonstrated in this Special Issue Such proposed approaches provide incisive methods to explore and predict the mechanical and structural characteristics of FGMs subjected to thermoelectromechanical loadings under various boundary and environmental conditions The contributions have resulted in enhanced activity regarding the prediction of FGM properties and global structural responses which are of great importance when considering the potential applications of FGM structures Furthermore the presented scientific scope is in some way an answer to the continuous demand for FGM structures and opens new perspectives for their practical use
